PREFATORY NOTE

THE subjoined Memoir on the obscure annals of the Gupta Kings of India was undertaken, in the first instance, with the limited purpose of describing Mr. Burgess's newly-acquired coins in the pages of his Archaeological Report for the season of 1874-5.

Circumstances connected with his return to India, and the incidentally-delayed calls for MS, have enabled me to revise and amplify several sections of my original text; others, wholly or partially set up in type, have been retained in their outline form; while, latterly, important notes, which would have required time to complete, have been deferred for future publication, so as to avoid any interference with the progress of the Editor's leading Report, already somewhat in arrears.

A brief notice of some Muhammadan coins—obtained on the same occasion—which illustrate the transfer of Ethnic supremacies in the valley of the Indus, concludes these independent Chapters.

SĀH AND GUPTA COINS, &c.

Mr. Burgess, during his late tour, succeeded in obtaining some very interesting specimens of the coins of the local Sāh kings of Surāshtra and their imperial Gupta successors which he has requested me to describe.*

I have taken advantage of the opportunity to arrange and classify in the accompanying autotype plate, contrasted examples of the various provincial currencies of the latter dynasty, and I have attempted, in a general way, to collect the extraneous data bearing on the still obscure history of a race, whose domination forms so important an epoch and hitherto undefined time-mark amid the dynastic revolutions of India within itself. This may be held to be a very bold expansion of a text based upon a handful of coins, but Numismatic studies I have always maintained, when properly and scientifically treated, open out a very large and expansive circle of investigation.

In the present instance there have unfortunately been few opportunities for systematic arrangement, or for the ordinary completion of details; but, incidentally, where coins have proved their leading title I have admitted them into the front rank, in which prominent position I can usually sustain them, when their rough edges preserve but fair traces of the marginal legends of the original die, and when the native engravers have not subsided into ignorant and mere mechanical imitators of device and superscription.

The materials available for the determination of the age and the spread of the dominions of the Guptas seem to arrange themselves in the following order—

- a. Inscriptions
- b. Written history
- c. Tradition
- d. Coins.

a.—INSCRIPTIONS.

The genealogy of the Gupta family has been singularly well-preserved, considering the limited range of their extant inscriptions and the persistent oblivion to which their successors would, perhaps designedly, have consigned them. The earliest of these, in point of time, is the Allahābād manifesto of Samudra Gupta, the fourth in succession of an ancestry claiming little pretension to renown, and the second only in the order of kings, who attained anything beyond restricted celebrity.

* A slight difference will be observed between the system of transliteration employed in the following pages and that followed by Mr. Burgess. The chief departure from his usage is in the marking the η by η , in preference to the unsightly η . My theory is, that dots below the line should, as far as possible, constitute the discriminating mark for consonants, and that accents above the line should be reserved for vowels. I prefer the acute ' to the circumflex ^ as less disfiguring to the vowel letter, a slight advantage inherent in the ^, and expect detrimental in maps

This then bears an important further advantage of a ready prepared model, in supplement to the writing current in his day an account of his own life, in the form of a great palimpsest,* attached to the original contemporary palimpsest in the old square off character in which Asoka, in the twenty-seventh year of his reign (B.C. 268), had promulgated, vividly, his undeveloped Buddhist tendencies, and his advocacy of the more simple doctrines of mercy to animals, the preservation of animal life, and the elevation of animal woe.†

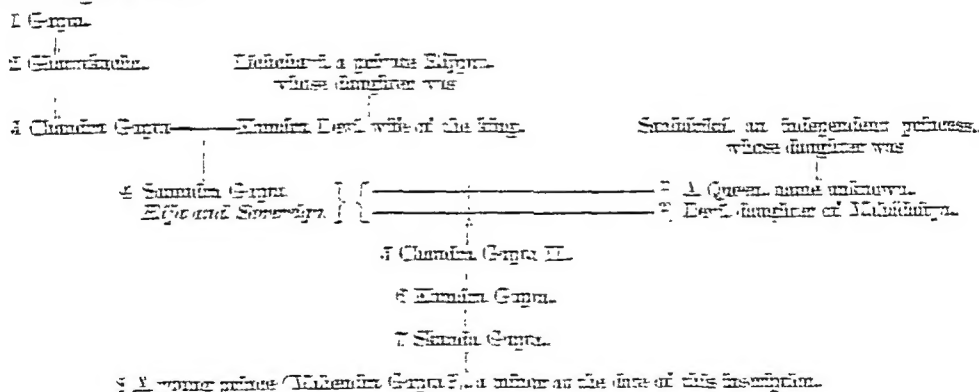

The second record of the Gupta lineage, likewise perpetuated on stone, is to be seen in the Vishakh inscription from the Katal mound, wherein Samudra's parentage is apparently repeated in accordance with the tenor of the earlier monument.‡ The genealogy of the family is further extended in the inscription on the Bharat M^t or monument, in the division of Ghazipur and in its counterpart at Bhoj,§ which carries the succession down to Samudra Gupta and an unnamed heir.¶

From these inscriptions the recognised line of kings may be restored after the following order :

The Gupta Kings.

1. Mahendra Śat Gupta.
2. Mahendra Śat Guptakumara.
3. Mahendraśatendra Śat Chandra Gupta I.
4. = Śat Samudra Gupta.
5. = Śat Chandra Gupta II.
6. = Śat Kumaragupta.
7. = Śat Samudra Gupta.

The family tree, originally reconstructed by Dr. Wilson, is of importance, in the present inquiry, as showing the moderately advanced position of the early members of the so-called royal line :—

* Dr. Wilson, *Journ. As. Soc. Beng.* vol. III. p. 244; *Palgrave's Essays*, vol. I. pp. 234, 235, 236.

Much emphasis has been laid by some modern commentators* on the appearance of the words *Shāhān Shāh* in the Samudra Gupta inscription at Allahābād, above quoted, as tending to prove that the Guptas must have been contemporary with the Sassanian kings of Persia (226-632, A.D.) I wish to rectify any such misapprehension, as the point is of real importance as collateral evidence. I have from the first contended† that this title was in nowise exclusively the property or impress of the Sassanian family. We have the *Kshādyathiya Kshādyathiyānam* of Darius,‡ and the counterpart ΒΑΣΙΛΕΥΣ ΒΑΣΙΛΕΩΝ with the *Rajaraja* and *Adhiraja* of the Bactrian or rather Indo-Scythian coins § We can now further cite the existence of a *Shāhiyāh* dynasty in Khārizm of the race of Cyrus,|| and point to the more immediate testimony of our Mathurā inscriptions, where Vāsudeva is designated as *Shāhi*, and, in other epigraphs, by the parallel *Devaputra*, which reappears in conjunction with the *Shāhān Shāh* on the Allahābād column—combinations, which would preferentially indicate the continued rule of some members of this Scythic race in outlying portions of their old dominions.

It does not form part of the immediate object of the present résumé, to examine the entire series of the Gupta inscriptions, but the following passages have been selected as furnishing authentic dates, applicable, as other data may chance to sanction, to the general determination of the Gupta place and epochal position in Indian history.

No. 2. Inscription of Chandra Gupta.¶

The short inscription at Udayagiri contains the name of Chandra Gupta under the title of "*Parama-bhātlāraka Mahārājādhirāja*," and the date of *Samvat* 82 [in figures] 11th of the bright half of Śrāvana.

No. 3. Inscription of Chandra Gupta **

The inscription on the eastern gate at Sanchi, near Bhilsa, commences, "To all respected Sramanas, the chief priests of the *āśasatha* ceremonial . . . The son of Amuka, the destroyer of his father's enemies, &c . . . obtaining the gratification of every desire of his life through the favor of the great emperor Chandra Gupta

. has given, &c. as an act of grace and benevolence of the great emperor Chandra Gupta, generally known among his subjects as Deva Rāja (Indra).

“ In the *Samvat* year 93 [in figures], Bhādrapada 10th.”*

No. 4. Translation of an Inscription on the Monolith of Kuhaon, in the Gorakhpūr division, N. W. P., India, by Babu Rajendra Lāla.

“ The year 141 having been over (or the close of the year 141), and the month of Jaishṭhya having arrived, the empire of Skanda Gupta—the floor of whose audience chamber had been swept by gusts from the bowing of the heads of kings by hundreds; sprung from the line of the Guptas; of wide extended fame; opulent beyond all others; comparable with Śakra; lord of hundreds of monarchs.”†

No. 5. Translation of an Inscription of the time of Skanda Gupta, on a copper-plate grant found at Indor, near Anupshahar on the Ganges.‡

“ Amen; may he, whom Brahmans, in obedience to law, bepraise with the harmony of meditation and the entire devotion of their minds . . . be your protection ! ”

“ In the year 146, in the month of Phālguna, the — (?) of the thriving and invincible kingdom of his most noble majesty, the supreme sovereign of great kings, the auspicious Skanda Gupta, for the promotion of prosperity in the possession of the owner Sarvanāga in Antarvedi (or the Doāb of the Ganges and Yamunā).”§

No. 6. Inscription of Skanda Gupta on the Northern face of the Girnār rock. ||

“ To the perfect one, Viṣṇu, who snatched from Bālī for the happiness of Indra,” &c. “ Afterwards he . . . who by his own arms obtained glory (*parākrama*), and who is the most distinguished of kings,” . . . “ may he, Skanda Gupta, be glorious ” . . . (the text goes on to detail Skanda Gupta’s difficulties in the selection of a fit ruler for Surāshtra and his ultimate choice of) Parnadatta ” . . . (who delegates his authority to his son) “ Chakrapālita.” . . . “ Afterwards, when in the course of nature the rainy season arrived . . . the lake Sudarṣana burst (its embankments). When a century of years *plus* thirty passed, in the sixth day of Bhādrapada, at night, counting from the era of Gupta ” (*Guptasya kāla*).

(Seven years seem to have elapsed before its repairs were either commenced or fairly advanced when a record appears) “ for the benefit of the king and of the city, in a

Soc.* article “ Kalidasa,” p. 31, and his revised translation of the inscription itself, *Journ. Bom. Br. R. As. Soc.* 1871, p. 59. General A. Cunningham in his *Archæological Report* for 1861–2, p. 92, gives a carefully corrected transcript of the original record, pl. XXX.

‡ *Journ. As. Soc. Beng.* 1874, p. 363, translation by Babu Rajendra Lāla.

§ Under date 23rd April 1875, General Cunningham, in a private letter to Mr. Fergusson, reports the discovery of no less than four *new* inscriptions belonging to the Gupta period. “ One of them is of Samudra Gupta, with the ślokas numbered in figures at the end. . . . A rock inscription of Chandra Gupta has the lines numbered in figures at the ends. A third inscription, dated S. 106, speaks of the Guptan maya, or Gupta family; and a fourth inscription is dated in S. 191.”

|| Translation of Dr. Bhāu Dājī, *Journ. Bom. Br. R. As. Soc.*, vol. VII. p. 121.

century of *samcatsaras* (years) *plus thirty plus seven*" (in the "month of *Chaitra*") . . . on the "first day of the first lunation of the (first) month of the Ghishma season," &c.

The concluding division of the inscription proclaims the completion of the undertaking, in the construction of a temple by Chakrapâhita, when, "from the era of the Guptas (*Guptânân kâla*) a century of years *plus thirty-eight* (having passed)."

Up to this time, I have been somewhat disposed to question the validity of the above interpretation, in respect to the use of the term *Gupta kâla*. I have now had an opportunity of comparing Messrs Westergaard and Jacob's facsimile, published in the *Journ. Bom. Br. R. As Soc.* with Sur Le Grand Jacob's own eye-transcript in MS, and the improved version of the original, undertaken for Dr Bhau Daji, by Pandurang Gopâla Pâdhya. I can have no hesitation in accepting the latter as the most intelligent reproduction; it brings out into perfect form letters that were merely fragmentary before, it seldom conflicts with, but constantly improves what were previously chaotic signs and symbols in the copies of Messrs Westergaard and Jacob.*

As regards the bearing of the term *Gupta kâla* upon this and other dated inscriptions, while I am fully prepared to admit the figures 130-138 into the ordinary family system of reckoning, I am not so sure that the designation of *Gupta kâla* in this instance, implies identity with Albirâni's understanding of the same term. I should rather connect it with the era then recognised and employed by the Guptas, whatever its origin and derivation, in contrast to the *local* system of annual dates, which we find on the Sâh coins, and which clearly does not accord with the Eastern scheme of proximate usage.

*No. 7. Translation of an Inscription on the Pillar at Eran in Bhopâl
Dr. Fitzedriccord Hall's version.*

"Triumphant is the four-armed divinity omnipresent; of whom the broad waters of the four seas are the couch; cause of the continuance, origin, destruction, and the like, of the universe; whose ensign is Garuda. In the year 103 on the twelfth day of the eighth fortnight of the month of Âshâdhat on the day of *Brihaspati*, and when Budha Gupta—ruling, with the genius of the regents of the quarters, over the interval, chosen land of the gods, between the Kâliudî and the Narmadâ . . . was king . . . a Brahman saint of the illustrious Maitrâyanîya monarchs . . . the great king Mâtrivishnu, a

* This copy, made for Dr. Bhau Daji, is reproduced as Plate XV in this Report

† It is necessary, in producing evidence for or against the ultimate import of these figures, to say that Professor Hall submitted the context of the passage embodying this date to Espé Dera Sâstian, a Benâres mathematician, with a view to an opinion as to its concurrence with the Vikramâditya era or that of Saka. The gist of the reply was, "it conforms to the era of Vikramâditya, and does not conform to that of Sâlvâhâna"—*Journ. As Soc. Beng.* 1861, pp 15-139. But with all respect for our Benâres calculator, we require to be told whether he has seen and met Colbrook's objections to the effect that "the eclipses mentioned in the [later] grants do not appear reconcilable with their dates," and that "it seems difficult to account for this disagreement of the dates and eclipses in any other way than by impeaching the inscription, the authenticity of which there is not otherwise any reason to question"—(*Essays*, vol II p 245). See also (p 357) for a possible explanation of the faulty result, in the introduction of "*Hâha* as an eighth planet, and as the immediate cause of eclipses." Prof Whitney, in his latest essay on "the Lunar Zodiac" (*New York*, 1874) ruthlessly exposes the imperfection of Indian astronomical knowledge and their methods of observation, which he climaxes by quoting their prediction of a *total* instead of a *partial* eclipse for February 6, 1860 (p 368).

There is much of the air of manufacture even in those examples the genuineness of which we need not contest; but when we find formal repetition upon repetition, the same quotations of denunciatory texts recurring time after time, merging almost into the similitude of "a printed form of bequest," and we are told by impartial examiners of the present day that, in one case, the sign manual of the grantor proves to be in the writing of some centuries later than the forms of the letters of the text* to which he is asserted to have affixed his signature with his own hand (खहकी), we cannot divest ourselves of the suspicion that the dates may have been just as loosely manipulated as other portions of the documents themselves, especially when it is felt that the natural tendency, in such cases, would be to *ante-date*, with the view of giving meretricious age, authenticity and the semblance of perpetuity to the title.† It is true that this retention and continued use of the earlier form of character, for the body of the text, may merely imply the official recognition of a sort of black-letter style of writing in the local Patent Office, and that any intentional deception in the matter of the grant itself may have been foreign to the purpose of the engrossers; while, nevertheless, imposing or auspicious dates‡ may have been *found*, or possibly old figures may have been copied mechanically with the standard phraseology from previous exemplars. I do not propose to enlarge upon the general question of the authenticity of these documents at the present moment, as they only contribute incidentally a side view to my leading subject; but it has become necessary to advert to the possible value of this species of evidence, as it has been occasionally put forward as a corrective of the true period of the Guptas, whose kingdom, in its western provinces, fell to the share of the Valabhis, who with their conterminous monarchies mainly supply the extant series of copper-plate grants, from whence these critical *test* dates are derived.

* This attestation or note at the end of the document is worthy of especial notice. The words are: "This is the own hand of Prasanta-rāga." . . . "When the writing of this attestation is compared with the body of the grant, a very considerable difference is apparent. The general style of the whole, and the forms of many individual letters, present a much more modern appearance. Judging from the character of the writing alone by Prinsep's alphabet, it would seem to belong to a period at least three centuries later than the character and date of the grant itself"—Prof J. Dowson, *Journ. R. As. Soc. N. S.* vol I p. 265

† Prinsep had, from the first, felt a difficulty in reconciling the dates of the kings named in the Gujart copper plates, remarking that "though there were six successions" (between the execution of the first and third Valabhi grants) "these must have been of less than the ordinary duration, for the minister who prepared the grant in Śrī Dharmasena's reign was Skanda Bhatta; whereas the minister who prepared the present grant is named as Madana Hila, son of Skanda Bhatta. Thirty or forty years will, therefore, be the probable interval occupied by the reigns of all (these) princes." But it has been left for later decyphers to discover that the self-

June 1875, p. 174.

‡ I prefer, in this preliminary stage of the inquiry, to quote the unprejudiced and usually-pronounced opinions of others who have had to comment, directly or indirectly, on the measure of reliance that can be placed upon the "time tables" of the western copper plates. General Cunningham, without contesting the real data these documents might supply, expresses himself as follows in regard to Dr. Bhanu Dajī's Brief Survey of Indian Chronology (*Journ. Bom. Br. R. As. Soc.* vol. VIII. p. 236), in order "to note the curious error in what he calls a correct genealogical table of the Balabhi kings supported by dates from copper plates. In this general I notice that Dhruvasena, who is dated as 310, is followed by six generations, all of which are made to pass away by 346, so that seven generations, including Dhruvasena, or six without him, are born, marry, and die in thirty-six years, which allows exactly six years to each generation."—Cunningham's *Arch. Report*, I. xxxi.

imperial politics. It gives us, in the most complete form we are able to cite, a notice of the dominant Seythio brotherhood, which extended its sway to Mathurá on the one side, and to Bhāwalpūr on the other, before the Gupta rule; regarding which, if the chronicle is wholly silent, it furnishes suggestive indications of the extinction of their power, in the accession of a Toramāna, should this joint king of the Kashmir Chronicle eventually prove to be identical with the monarch named in the inscriptions at Eran and Gwālior given in abstract, pp. 5-6 ante.

After enumerating the reigns of (1) Aśoka, (2) Jaloka (s. l.), and (3) Dāmodhara, the chronicle continues:—

"Dāmodhara was succeeded by three princes who divided the country, and severally founded capital cities named after themselves. These princes were called Hushka, Jushka, and Kanishka,* of Turushka or Tatar extraction. . . . They are considered synchronous, but may possibly be all that are preserved of some series of Tatar princes who, it is very likely, at various periods, established themselves in Kashmir."†

"Śreṣhtasena also called Pravarasena reigned 30 years and left his kingdom to his two sons Hiranya and Toramāna; the former holding the superior station of the *Sāmrdjya*, and the latter that of the *Taucarājya*, or being respectively Emperor and Cæsar, a division of power of considerable antiquity amongst the Hindus. . . . The latter having proceeded to strike coins (*dināra*) in his own name, the elder brother (the *Sāmrdja*) took offence at the measure, and deposed the *Taucarāja* and kept him in close confinement. . . . Toramāna died in captivity. The ruler of Ujain at that time was Śrīman Harsha Vikramāditya, who after expelling the Mlechchhas and destroying the Śakas, had established his power and influence throughout India. In his train was a Brahman named Mātri-gupta to whom he was much attached; upon hearing of the vacant situation of the Kashmir throne, he recommended Mātri-gupta for election, who was accepted by the nobles as their king."

Alhīrānī.

A marked contrast will be detected between the vague utterances and confined purpose of the Hindu Pandit and the critical efforts at precision and comprehensive range of inquiry of the Muslim mathematician,‡ trained in the old *rudus* of Aryanism,

* Alhulfol says "brothers." Gladwin's Translation, ii. 171.

General Cunningham considers that he has succeeded in identifying all the three capitals the sites of which are placed within the limits of the valley of Kashmir, i.e.,

"*Kanishka-pura* (Kanishkpur) had Kāmpur, i.e. 10 miles S. of Srinagar, known as Kampur Sarai

"*Hushka-pura*, the Hushka-land of Hsien Thsang—the Ushkar of Alhīrānī—now surviving in the village of Ushkara, 2 miles S.E. of Barāhmula.

"*Jushka-pura* is identified by the Brahmans with Zukru or Zukur, a considerable village 4 miles N. of the capital, the *Sikerooh* of Troyer and Wilson—"Ancient Geography of India, London, 1871, p. 99.

† Prof. H. H. Wilson, "An Essay on the Hindu History of Kashmir," *Asiatic Researches*, vol. XV. p. 23. See also Troyer's *Histoire des Rois du Cachmir*, vol. II. p. 19. See also Hsien-Thsang, Paris, 1853, vol. II. pp. 42, 106, &c.

‡ In the proper order of dates Alhīrānī precedes the author of the *Rājā Tarangīnī*. I have placed him last in the present résumé as giving the fullest summary of dates and events, and as more directly associated with tradition, which singularly supports some of his most contested statements.

au centre de l'empire, dans la contrée nommée Aryavariha. Les Indiens le font naître dans une classe autre que celle des Sakya; quelques-uns prétendent qu'il était Soudra et originaire de la ville de Mansoura; il y en a même qui disent qu'il n'était pas de race indienne, et qu'il tirait son origine des régions occidentales. Les peuples eurent beaucoup à souffrir de son despotisme, jusqu'à ce qu'il leur vint du secours de l'Orient. Vikramāditya marcha contre lui, mit son armée en déroute, et le tua sur le territoire de Korour, situé entre Moultan et le château de Louny. Cette époque devint célèbre, à cause de la joie que les peuples ressentirent de la mort de Saca, et on la choisit pour ère principalement chez les astronomes.

" Ballaba, qui a donné aussi son nom à une ère, était prince de la ville de Ballaba, au midi de Anhalouara, à environ trente *yodjanas* de distance. L'ère de Ballaba est postérieure à celle de Saca de 211 ans. Pour s'en servir, on pose l'ère de Saca, et l'on en ôte à la fois le cube de 6 (216) et le carré de 5 (25). Ce qui reste est l'ère de Ballaba. Il sera question de cette ère en son lieu. Quant au Goutta-kāla (ère des Gouttas), on entend par le mot *goutta* des gens qui, dit-on, étaient méchants et puissants; et l'ère qui porte leur nom est l'époque de leur extermination. Apparemment, Ballaba suivit immédiatement les Gouttas; car l'ère des Gouttas commence aussi l'an 251 de l'ère de Saca. L'ère des astronomes commence l'an 597 de l'ère de Saca. C'est à cette ère qu'ont été rapportées les tables Kanda Khātaka, de Brahma goutta. Cet ouvrage porte chez nous le titre de *Arland*. D'après cela, en s'en tenant à l'an 400 de l'ère de Yazderjêd, on se trouve sous l'année 1193 de l'ère de Sri-Harscha, l'an 1088 de l'ère de Vikramāditya, l'an 953 de l'ère de Saca, l'an 712 de l'ère de Ballaba et celle des Gouttas. . . .

" Déjà je me suis excusé sur l'imperfection de ce qui est dit ici, et j'ai averti que les résultats que je présente offraient quelque incertitude, vu les nombres qui excèdent celui de cent."—*Journal Asiatique*, 4me série, tom. iv. (1844).

M. Reinaud's translation here quoted was based upon a confessedly imperfect copy of the then unique but faulty Constantinople MS. of the *Tārīkh-i-Hind*. It has frequently been called in question by those Indian commentators to whom its data came as a revelation from within. As I had to a certain extent accepted the value and importance of the information it conveyed, I sought the earliest opportunity of confirming or correcting its terms by the text of the new and more perfect manuscript of M. Schefer, which has been entrusted to Professor Sachau to aid his grand undertaking of a corpus of the works of Albirūnī; the most important sections of which are about to be published under the joint auspices of the London Oriental Translation Fund and the German Text Society.

* Albirūnī, in another part of his work, attributes many of the complications and obscurities imported into Indian texts, to the prevailing system of reducing everything into verse, for the sake of the obvious facility of learning by heart, so often to the entire detriment of the sense of the original; he adds, "J'ai reconnu, à mes dépens, l'inconvénient de cet usage."—Reinaud *Mém. sur l'Inde*, p. 334. Perhaps one of the most instructive expositions of the gradations of the process, under which the Indian art of memory was forced and matured, is to be found in Professor Haug's paper, presented to the Oriental Congress of London in 1874, from which I take the following extracts:—

"The *Vêda* is the only sacred code that has been handed down to posterity solely by oral tradition, which has remained, even up to the present day, the only legitimate way of transmitting the ancient divine

au centre de l'empire, dans la contrée nommée Aryavarttha. Les Indiens le font naître dans une classe autre que celle des Sakya; quelques-uns prétendent qu'il était Soudra et originaire de la ville de Mansoura; il y en a même qui disent qu'il n'était pas de race indienne, et qu'il tirait son origine des régions occidentales. Les peuples eurent beaucoup à souffrir de son despotisme, jusqu'à ce qu'il leur vint du secours de l'Orient. Vikramāditya marcha contre lui, mit son armée en déroute, et le tua sur le territoire de Kourou, situé entre Moultan et le château de Louny. Cette époque devint célèbre, à cause de la joie que les peuples ressentirent de la mort de Saca, et on la choisit pour ère principalement chez les astronomes.

"Ballaba, qui a donné aussi son nom à une ère, étant prince de la ville de Ballaba, au midi de Anhalouara, à environ trente *yodjanas* de distance. L'ère de Ballaba est postérieure à celle de Saca de 241 ans. Pour s'en servir, on pose l'ère de Saca, et l'on en ôte à la fois le cube de 8 (216) et le carré de 5 (25). Ce qui reste est l'ère de Ballaba. Il sera question de cette ère en son lieu. Quant au Goutpa-kāla (ère des Goutpas), on entend par le mot *goutpa* des gens qui, dit-on, étaient méchants et puissants; et l'ère qui porte leur nom est l'époque de leur extermination. Apparemment, Ballaba suivit immédiatement les Goutpas; car l'ère des Goutpas commence aussi l'an 241 de l'ère de Saca. L'ère des astronomes commence l'an 587 de l'ère de Saca. C'est à cette ère qu'ont été rapportées les tables Kanda Khātaka, de Brahma goutpa. Cet ouvrage porte chez nous le titre de *Arkand*. D'après cela, en s'en tenant à l'an 400 de l'ère de Yazdegerd, on se trouve sous l'année 1488 de l'ère de Sri-Harscha, l'an 1088 de l'ère de Vikramāditya, l'an 933 de l'ère de Saca, l'an 712 de l'ère de Ballaba et celle des Goutpas. . . .

"Déjà je me suis excusé sur l'imperfection de ce qui est dit ici, et j'ai averti que les résultats que je présente offraient quelque incertitude, vu les nombres qui excèdent celui de cent."*—*Journal Asiatique*, 4me série, tom. iv. (1844).

M. Renaud's translation here quoted was based upon a confessedly imperfect copy of the then unique but faulty Constantinople MS. of the *Tārīkh-i-Hind*. It has frequently been called in question by those Indian commentators to whom its data came as a revelation from within. As I had to a certain extent accepted the value and importance of the information it conveyed, I sought the earliest opportunity of confirming or correcting its terms by the text of the new and more perfect manuscript of M. Schefer, which has been entrusted to Professor Sachau to aid his grand undertaking of a corpus of the works of Al-Bīrūnī, the most important sections of which are about to be published under the joint auspices of the London Oriental Translation Fund and the German Text Society.

* Al-Bīrūnī, in another part of his work, attributes many of the complications and obscurities imported into Indian texts, to the prevailing system of reducing everything into verse, for the sake of the obvious facility of learning by heart, so often to the entire detriment of the sense of the original, he adds, "J'ai reconnu, à mes dépens, l'inconvénient de cet usage."—*Renaud Mem sur l'Inde*, p. 331. Perhaps one of the most instructive expositions of the gradations of the process, under which the Indian art of memory was forced and matured, is to be found in Professor Haug's paper, presented to the Oriental Congress of London in 1874, from which I take the following extracts —

"The *Veda* is the only sacred code that has been handed down to posterity solely by oral tradition, which has remained, even up to the present day, the only legitimate way of transmitting the ancient divine

irreconcilable in the statements of Albîrûnî. The tradition may be imperfect* as such old-world tales are liable to become, but there is an instructive confirmation of one obscure portion of the earlier history given by the Muhammadan inquirer, and a clear explanation of the causes of the local transfer of power, combined with an important reference to the conventional Imperial delegation of authority to a son, as well as an indication of the length of the reigns of two kings, to be found nowhere else; and to complete the tale, we trace in its details a fully reasonable accord with the more precise data furnished independently by inscriptions and coins.

* The bards relate that Vâlâ Râjâ, son of Vâlâ Warsingji, reigned in Junâgadh and Vantahlî. . . . Râma Râjâ was of the Vâlâ race. It is said in Saurâshtra that, previous to the rise of the kingdom of Junâgadh-Vantahlî, Valabhinagar was the capital of Gujarât. The rise of Valabhi is thus told by the bards. 'The Gupta kings reigned between the Ganges and Jamnâ rivers. One of these kings sent his son Kumâra-pâl Gupta to conquer Saurâshtra, and placed his viceroy Chakrapâni, son of Prâudat, one of his Amîrs, to reign as provincial governor in the city of Wâmanastahlî (the modern Wanthali). Kumâra-pâl now returned to his father's kingdom. His father reigned twenty-three years after the conquest of Saurâshtra and then died, and Kumâra-pâl ascended the throne. Kumâra-pâl Gupta reigned twenty years and then died, and was succeeded by Skanda Gupta, but this king was of weak intellect. His *senâpati*, Bhattâraka, who was of the Gehlotî race, taking a strong army, came into Saurâshtra, and made his rule firm there. Two years after this Skanda Gupta died. The *senâpati* now assumed the title of King of Saurâshtra, and, having placed a governor at Wâmanastahlî, founded the city of Valabhinagar. At this time the Gupta race were dethroned by foreign invaders.'†

* Professor Bîndarkar has criticised certain items of this tradition in the following terms —

"But the tradition itself, though interesting as giving the truth generally, cannot be considered to be true in the particulars. For, in the first place, it makes Chakrapâni the son of Prâudat, who is certainly the Chakrapâlita son of Parnadatta of the Junâgadh inscription (*Journ. Bom. Br. R. As. Soc.* vol. VII pp. 122, 123, *supra* p. 4), viceroy of the father of Kumâra Gupta, and grandfather of Skanda Gupta, while the inscription represents Parnadatta as Skanda Gupta's viceroy, and Chakrapâlita as governor of a certain town, appointed to that place by his own father. Again, Skanda Gupta is represented as a weak king in the tradition; while his inscriptions, magniloquent though they are, do show that he must have been a powerful monarch. Lastly, Bhattâraka is mentioned as having assumed the title of King, while the Valabhi copper plates speak of him as *Senâpati*, and represent Drona Sinha, his second son, to have first assumed that title (*Journ. As. Soc. Bengal*, vol. IV, Mr. Wuthea and an unpublished grant of Guhasenaj). The tradition, therefore, is not entitled to any reliance as regards the particulars. It simply gives us what was known before, that the Valabhis succeeded the Guptas."—*Indian Antiquary*, vol. III. (1874), p. 303.

† Major J. W. Watson, *Legends of Junâgadh*, *Indian Antiquary*, (Nov. 1873,) vol. II, p. 312

irreconcilable in the statements of Alḥarūfī. The tradition may be imperfect* as such old-world tales are liable to become, but there is an instructive confirmation of one obscure portion of the earlier history given by the Muhammadan inquirer, and a clear explanation of the causes of the local transfer of power, combined with an important reference to the conventional Imperial delegation of authority to a son, as well as an indication of the length of the reigns of two kings, to be found nowhere else; and to complete the tale, we trace in its details a fully reasonable accord with the more precise data furnished independently by inscriptions and coins.

* The bards relate that Vālā Rājā, son of Vālā Warsingū, reigned in Junāgaḍh and Vanthālī. . . . Rāma Rājā was of the Vālā race. It is said in Saurāshtra that, previous to the rise of the kingdom of Junāgaḍh-Vanthālī, Valabhinagar was the capital of Gujārat. The rise of Valabhi is thus told by the bards. 'The Gupta kings reigned between the Ganges and Jamnā rivers. One of these kings sent his son Kumāra-pāl Gupta to conquer Saurāshtra, and placed his viceroy Chakrapāni, son of Prāndat, one of his Amīrs, to reign as provincial governor in the city of Wāmanasthālī (the modern Wanthālī). Kumāra-pāl now returned to his father's kingdom. His father reigned twenty-three years after the conquest of Saurāshtra and then died, and Kumāra-pāla ascended the throne. Kumāra-pāl Gupta reigned twenty years and then died, and was succeeded by Skanda Gupta, but this king was of weak intellect. His *senāpati*, Bhattachaka, who was of the Gehlotī race, taking a strong army, came into Saurāshtra, and made his rule firm there. Two years after this Skanda Gupta died. The *senāpati* now assumed the title of King of Saurāshtra, and, having placed a governor at Wāmanasthālī, founded the city of Valabhinagar. At this time the Gupta race were dethroned by foreign invaders"†

* Professor Bhandarkar has criticised certain items of this tradition in the following terms —

"But the tradition itself, though interesting as giving the truth generally, cannot be considered to be true in the particulars. For, in the first place, it makes Chakrapāni the son of Prāndat, who is certainly the Chakrapāni son of Parnadatta of the Junāgaḍh inscription (*Journ. Bom. Br. R. As. Soc.* vol. VII pp. 122, 123, *supra* p. 4), viceroy of the father of Kumāra Gupta, and grandfather of Skanda Gupta, while the inscription represents Parnadatta as Skanda Gupta's viceroy, and Chakrapāni as governor of a certain town, appointed to that place by his own father. d.—COINS.

As fitly introductory to the Gupta gold coinage, I prefix a specimen prototype in the rare and little known coins of the Indo-Scythian king *Vásudeva*, whose name or title figures so prominently in the Mathurá inscriptions.

As the general range of the dates and localities of the Indo-Scythian inscriptions are calculated to throw important light upon the history of the period, and have a special bearing upon the distribution of the contemporary Baktrian and Indian Páli alphabets, I annex a résumé of these documents lately prepared for my publication on "Ancient Indian Weights."*

Indo-Scythian Inscriptions (in the Indo-Páli Alphabet).

- At Mathurá.*—KANISHKA. *Mahárāja Kanishka. Samvat 9.*
 HUVISHKA. *Mahárāja DEVAPUTRA Huvishka. Hemanta, S. 39.*
Mahárāja RÁJATIRÁJA DEVAPUTRA Huvishka. Grishma, S. 47.
Mahárāja Huvishka. Hemanta, S. 48.
 VÁSUDEVA. *Mahárāja Rájatirāja DEVAPUTRA Vásu(deva). Varsha, S. 44.*
Mahárāja Vásudeva. Grishma, S. 83.
Mahárāja Rájatirāja, SHÁHI, Vásudeva. Hemanta, S. 87.
Rája Vásudeva. Varsha, S. 98.

Indo-Scythian Inscriptions (in the Baktrian-Páli Alphabet).

- In other localities.*—Bhāwalpūr. *Maharaja Rajadiraja DEVAPUTRA Kanishka. Samvat 11, on the 28th of the (Greek) month of Dæsius.†*
 Manikyāla Tope. *Maharaja Kaneshka, GUSHANA vaṣa samvardhaka. "Increaser of the dominion of the Gushans" (Kushans). Samvat 18.*
 Wardak Vase. *Māharaja rajatiraja Huveshka. Samvat 51, 15th of Artemisius.*

In addition to these Baktrian-Páli inscriptions, we have a record in the same alphabet, of a king called Moga (Moa?), on a copper plate from Taxila, wherein the *Satrap Liako Kusuluko* (Kozola?) speaks of the 78th year of the "great king, the great Moga," on the 5th of the month of Panæmus; and an inscription from Takht-i-Bahi of King Gondophares, dated in his 26th year, with a corresponding entry of the month of Vaiśākḥ, Samvat 103.‡

* "Ancient Indian Weights." The introductory chapter of Marsden's *Numismata Orientalia*, Trübner, 1874.

† The opening line of the Zeda inscription of Samvat 11, with the Indian month of *Ashāḍha*, can only be doubtfully associated with the two lines of small writing below it, in which the name of Kanishka is found. Cunningham's *Arch. Rep.* vol. V. p. 57.

‡ *Journ. R. As. Soc.* vol. VII. N. S. p. 377; Cunningham, *Arch. Rep.* vol. V. p. 59.

It would contribute very material aid towards the reconstruction of the general chronology of India if we could determine the era to which these inscription dates refer; it is clear that many of them are mere regnal dates, but as some of them run up as high as 98, this alone puts them beyond any such confined system of reckoning, and even outside the probable duration of the combined reigns of the three brothers, "Hushka, Jushka and Kaniskka" of the Kashmir chronicles.

The next point we have to consider is the nature of the inscriptions themselves, as a rule they are not royal manifestoes, but records of the piety, in gifts or endowments, of private individuals, and as such would primarily refer to some well established and generally recognised era. What was that era? Vikramāditya (57 B.C.) would place the documents too early; Śaka (70 A.D.)* too late. I have recently suggested the claims of the Seleucidan era (1st September, B.C. 312), allowing for the omission of the current figure for *hundreds*, which is now discovered to have been the practice adopted by the Baktrian Greeks.

As the simplest way of stating my views, under the latter aspect, I quote in its integrity a letter I lately addressed to "*The Academy*," which has already attracted much attention among Numismatists.†

"Baktrian Coins and Indian Dates.

"December 16, 1874.

"Those of your readers who concern themselves with the vexed question of Indian dates may be interested to learn that evidence of some importance, in that direction, has recently been obtained from the coins of the Baktrian Greeks. Since Bayer's premature attempt to interpret a Mint-monogram on a piece of Eukratides as 108,‡ Numismatists have not lost sight of the possible discrimination of dates as opposed to Mint-marks on the surfaces of these issues §

"In 1858 I published, in my edition of Prinsep's *Essays on Indian Antiquities*, a notice of the detached letters ΟΓ as occurring on a coin of Eukratides (No. 8, p. 184, vol. II) and ΠΓ as found on the money of Heliokles (No. 1, p. 182), which letters would severally represent the figures 73 and 83, but these numbers were apparently too low to afford any satisfactory elucidation in their application as dynastic dates

"On a chance visit to the British Museum, a short time ago, Mr. Percy Gardner was so obliging as to show me all the latest acquisitions of Baktrian coins, and among them a specimen of Heliokles with the full trilateral date, after the manner of the Syrian mints, of ΠΠΓ or 183,|| which, when tested by the Seleucidan era (311-183), brings his reign under the convenient date of B.C. 128, and authorises us to use the abbreviated figures, under the same terms, as ΟΓ=73 for 173 Sel.=138 B.C. for Eukratides, and

* Monday, 14th March, A.D. 78, Julian style.

† *Num Chron* 1875, p. 5, Agra Archaeological Society, Annual Meeting, 1875.

‡ *Hist Reg Græcorum Bactrianæ* St. Petersburg, 1738, p. 44

§ H. H. Wilson, *Ariana Antiqua*, pp. 235, 238 General A. Cunningham, *Numismatic Chronicle*, vol. IX N. S. p. 230

the repeated $\Pi\Gamma=83$ for 183 Sel.=128 for Heliokles, a date which is further supported by the appearance of the exceptionally combined *open monogram* $\overline{A}i$ (ΠA), or 81 for 181=130 B.C. on his other pieces.

"In addition to the value of these data as fixing definitively, though within fairly anticipated limits, the epochs of these prominent Baktrian kings, the conventional use of the *abbreviated definition* introduces us at once to local customs, to which the Greeks so readily lent themselves, in their adoption of the method of reckoning by the Indian *Loka Kāla*,* which simplified the expression of dates, as we do now, in the civilised year of our Lord, when we write 74 for 1874.

"The domestication of the Seleucid era and its incorporation of Indian methods of calculation, leads on to the consideration of how long this exotic system of computation maintained its ground in Upper India, and how much influence it exerted upon the chronological records of succeeding dynasties. I have long been under the impression that this influence was more widespread and abiding than my fellow antiquarians have been ready to admit,† but I am now prepared to carry my inferences into newer channels, and to suggest, as a commencement, that the Indo-Scythian 'Kanishka' kings continued to use the Seleucid era, even as they retained the minor sub-divisions of the Greek months which formed an essential part of its system; and under this view to propose that we should treat the entire range of dates of the 'Hushka, Jushka, and Kanishka' *family* of the Rāja Taranginī,‡ which their inscriptions expand from ix. to xcviii.§, as pertaining to the fourth century of the Seleucid era, an arrangement which will bring them into concert with our reckoning from 2 B.C. to 87 A.D. A scheme which would moreover provide for their full possession of power up to the *crucial* 'Śaka' date of 78-79 A.D., and allow for the continuance of certain local reigns as claimed by their subordinate public epigraphs.

"The Śaka era, with its Indian months as recorded in the Gupta inscriptions,|| belongs to a new order of things, but this much may be added in conclusion, that the earliest epigraph of Chandra Gupta, the fifth of that race, dated in 82 Śaka, or 161 A.D., leaves a satisfactory margin for the heroic efforts and successful conquests of the second Vikramāditya (of Albīrūnī's legends) and his immediate successors."

I have no wish to press these suggestions for more than they are worth, or to precipitate a decision in their favour; but in addition to the incorporation of the Macedonian months in the Baktrian-Pāli inscriptions, which clearly, in their higher numbers, follow an identical era with the Mathurā dedicatory epigraphs couched in the Indian Pāli alphabet, there are many other evidences of the spread and continued use

* Albīrūnī, writing in India in 1031 A.D., tells us, "Le vulgaire, dans l'Inde, compte par siècles, et les siècles se placent l'un après l'autre. On appelle cela le Samvatsara du cent. Quand un cent est écoulé, on le laisse et l'on en commence un autre. On appelle cela Loka-kāla, c'est-à-dire comput du peuple."—(Reinaud's Translation, *Fragments Arabes*, Paris, 1845.)

† *Journ. R. As. Soc.* vol. XII. p. 41; *Journ. As. Soc. Beng.* 1855, p. 565, and 1872, p. 175; Prinsep's *Essays*, vol. II. p. 86; *Journal Asiatique*, 1863, p. 398.

‡ P. 10, *supra*.

§ *Journ. R. As. Soc.* vol. V. N.S. p. 122. "Ancient Indian Weights," 1874, p. 46. General Cunningham's *Arch. Rep.* vol. III. p. 29. (Reproduced above, p. 16.)

|| Prinsep's *Essays*, vol. I. p. 231 *et seq.*

of the Seleucid system of dating,* which would have tended to commend it to the less enlightened occupying Scythians who succeeded to outlying sections of the dominions of the Baktrian Greeks in India.

The Indo-Scythian inscriptions extant at Mathurá are not dated in *months*, but in the old triple seasons, *Grishma*, *Varsha*, and *Hemanta*, like so many of the ancient writings in the caves of Western India,† and it is a suggestive fact, as bearing upon the omission or non-specification of the *hundreds*, that none of the Indo-Scythian inscriptions at Mathurá run into three figures—they approach closely but do not touch the 100. And the first inscription, *in situ*, of later date, or 135 of some undefined *Samvat*, presents us with the earliest specimen among these records of a fully developed *Hindu month* (*Pushya*).‡

Since the publication of my letter of the 15th December 1874 Albirani's account of the method of dating, in the *Lokakála*, by the omission of the *even* hundreds, has been opportunely confirmed by the discovery that the inhabitants of Kashmir follow this system of computation in all its integrity to the present day.§

I am well aware that Menander had so far departed from the traditional Indo-Greek abbreviated dates, as to confine himself on his coins to *regnal* years, inasmuch as I am able to cite from his extant money the dates A 1, B 2, Γ 3, Δ 4, E 5, H 8; but this no more proves the general surrender of the consecutive eral system of dating than the Mathurá regnal dates establish the rule in the mixed instances above adverted to.

I can also quote a newly discovered Parthian era, commencing in 248 B.C. || which viewing its now ascertained employment in the Cuneiform documents of the

* Since proposing the above identifications, I have examined all the Baktrian coins within reach to seek for new examples of these abbreviated dates, but without success. I am able, however, to revert to two very curious contributions in the same line from the coins of Apollodotus, in the letters E = 60 and EE = 65, published by me some years ago in Prinsep's *Essays*, vol. II p. 184, and in the *Numismatic Chronicle*, vol. XIX p. 22 (*Monograms*, p. 66). Under the system of the omission of the hundreds, these dates would correspond with B.C. 161 and 146—a period which would not be at all inappropriate for this king, who has been variously placed by Lassen at 160 B.C., by Wilson at 110 B.C., and by Cunningham at 165 B.C. One coincidence in connexion with these two Greek letter-dates is that they are in both cases either preceded or succeeded by the letters NO in a similar position at the foot of the device on the reverse, which may possibly stand for the initial letters of *nomos*, "usage, custom," &c., or some of its derivative forms, though this is avowedly a mere conjecture open to further investigation.

† Cunningham's *Arch. Report*, vol. p. III. 36, *Journ. R. As. Soc.* vol. V p. 190, and the Cave Inscriptions, in the *Journ. Bom. Br. R. As. Soc.* See also *Hünen Thsang*, vol. II p. 63, and Elliot's *Glossary*, vol. II. p. 47.

‡ This can by no possibility be made into a Vikramáditya date, it is more than a question if it can even refer to Śaka. Similarly, in regard to these dates, I am altogether undisturbed by the *Hindu month* in the Gondophares inscription, p. 30 ante; in short, whenever we pass the *hundred* we lose Seleucidan *months*, though it would be unwise to propound any absolute law on the subject with our present scanty materials.

§ This second inscription ends with the words *Saka Kāla gatāvdah 726*—that is, "Śaka Kāl years elapsed 726," equivalent to A.D. 804, which is therefore the date of the temple. This date also corresponds with the year 80 of the local cycle, which is the *Lok-kāl* of Kashmir or cycle of 2,700 years, counted by centuries named after the 27 *nakshatras*, or lunar mansions. The reckoning, therefore, never goes beyond 100 years, and as each century begins in the 25th year of the Christian century, the 80th year of the local cycle is equivalent to the 4th year of the Christian century. General Cunningham, *Arch. Rep.* 1875, vol. V. p. 181. See also Dr. Buhler's *Report*, quoted in the *Athenæum* of the 20th Nov. 1875.

|| *Assyrian Discoveries*, by George Smith London, 1875, p. 399. From the time of the Parthian conquest it appears that the tablets were dated according to the Parthian style. There has always been a doubt as to the date of this revolt, and consequently of the Parthian monarchy, as the classical authorities have left no evidence as to the exact date of the rise of the Parthian power. I, however, obtained three Parthian tablets from Babylon; two of them contained double dates, one of which, being found perfect, supplied the required evidence, as it was

period, and obvious official preference may have secured a larger range of acceptance than could otherwise have been conjectured, and may thus, in its associate extension with the power of the race, arrogate some claim to rule and regulate our obscure Indo-Scythian dates. Testing the Mathurá figures by this system with its third century commencing in 48 B.C., we have another possible approximation towards the solution of this great enigma.

The comparative estimates by the four methods of computation, stand roughly as follows:—

Vikramáditya -	-	-	-	B.C. 48 to A.D. 41.
Śaka -	-	-	-	A.D. 88 to A.D. 177.
Seleucidan -	-	-	-	B.C. 2 to A.D. 87.
Parthian -	-	-	-	B.C. 39 to A.D. 50.

VÁSUDEVA.

No. I.* Gold.

Trésor de Numismatique, Pl. LXXX. figs. 10, 11.†

Obverse.—Scythian figure, standing to the front, casting incense into the recognised small Mithraic altar. To the right a trident with pennons; to the left a standard with bosses and streamers.

Legend, around the device, portions of the full titles of PAO NANO PAO KOPANO.

Below the left arm 𑀧 *Vasu*, in the exact form of character to be seen in his Mathurá inscriptions.‡ To the left, on the side of the altar, the letter 𑀧 .

Reverse.—The Indian Goddess Párvatī seated on an open chair or Greek throne, extending in right hand the classic regal fillet; Mithraic monogram to the left.

Legend, APΔOXPO,§ “half Śiva,” i.e. Párvatī.

dated according to the Seleucidan era, and according also to the Parthian era, the 144th year of the Parthians being equal to the 208th year of the Seleucidae, thus making the Parthian era to have commenced B.C. 248. This date is written: “Month . . . 23rd day 144th year, which is called the 208th year, Arsaces, King of kings.”

* The Roman numbers, further defined by a star (*), are used to denote such coins as do not find a place in the exclusively continuous Gupta series embodied in the Autotype Plate.

† Those who wish to see nearly exact counterparts of these types may consult the coins figured in plate XIV., *Ariana Antiqua*, figs. 19, 20. The latter seems even to have an imperfect rendering of the 𑀧 *va* on the obverse,

with 𑀧 *su* (formed like *pu*) on the reverse. For corresponding types see also *Journ. As. Soc. Beng.* vol. V. pl. 36, and Prinsep's *Essays*, pl. 4. General Cunningham, *Numismatic Chronicle*, vol. VI. O. S. pl. I. fig. 2.

‡ Plate XV. figs. 8, 16, 20. The *u* is not curved, but formed by a mere elongation of the down stroke of the 𑀧 *s*, which constitutes the vowel, as in the case of the *u* on *Samudra Gupta's* coin No. 2 of the accompanying autotype plate VII. The omission of the *Deva* on the coins is of no more importance than the parallel rejection of the *Gupta*, where the king's name is written *downwards* in the confined space below the arm. Facsimiles of these inscriptions may also be consulted in Professor Dowson's paper on the Mathurá Inscriptions, *Journ. R. As. Soc.* vol. V. N.S. pl. IV. figs. 15, vi., &c. See also General Cunningham's remarks on Vásudeva, *ibid.* p. 195. General Cunningham proposes to amend Professor Wilson's tentative reading of *Baraono* on the two gold coins, *Ariana Antiqua*, pl. XIV. figs. 14, 18 (p. 378), into PAO NANO PAO BAZOΔHO KOPANO. The engraving of No. 14 certainly suggests an initial B in the name, and the AZ and O are sufficiently clear. We have only to angularise the succeeding O into Δ to complete the identification. These coins have a reverse of Śiva and the Bull.—*Arch. Rep.* vol. III. p. 42. Dr. Kern does not seem to have been aware of these identifications when he proposed, in 1873 (*Révue Critique*, 1874, p. 291), to associate the Mathurá Vásudeva with the Indo-Sassanian Pahlvi coin figured in Prinsep, pl. VII. fig. 6. *Journ. R. As. Soc.* vol. XII. pl. 3; *Ariana Antiqua*, pl. XVII. fig. 9.

§ APΔOXPO, Ard-Ugra. The latter is the name of Śiva. The preceding Khadphises Indo-Scythians had, for

GHATOT KACHA

No 1. Plate VII. Gold, weight 116 gr. Very rare. B. M.

[The numbers prefixed to these coins correspond, without break or interruption, with the serial order of the numbers entered in the accompanying Autotype Plate. The extra or casual specimens are marked by Roman figures, with a further discriminating *.]

Obverse.—The King standing to the front, clothed very much after the manner of his Indo-Scythian predecessors.* The right hand casts incense into the conventional diminutive Mithraic altar, while the left holds the typical standard of the rayed Sun.

Marginal legend imperfect.

Under the arm { का *kā*.
च *chā*.

Reverse.—*Pārvati* holding a lotus flower in the right hand, with a cornucopia of western design on the left arm. In the field, the Indo-Scythian monogram .†

Legend—सर्वराजोद्धेत Sarvarājochchhetta. "The exterminator of all Rājās."

SAMUDRA GUPTA.

No. 2. Gold. B. M.

Obverse.—The king arrayed after the Indian fashion with a *dhottī* tightly bound round his loins, elaborate native head-dress, very large ear-rings, necklace, and armlets of chosen jewels, &c., in the act of shooting a tiger who faces him to the full front.

Legend, restored.—स्यधरापराक्रम Tyāghra parākrama "The tiger hero."

Reverse.—*Pārvati* with lotus flower and *Garuḍa* standard, standing upon a Dragon or some oriental type of marine monster.‡

Legend—राजासमुद्रगुप्त Rājā Samudra Gupta

their reverse device, a figure leaning on a Bull (*Nandi*), regarding which Professor Wilson remarks "The figure leaning on the Bull appears, by the breasts and protuberant hips, to be female, but it is not invariably so, and is sometimes, what it probably always should be, of an androgynous outline, the figure being that of Siva and his spouse in their composite character of *Arddha nārīswara*, Siva half-femine."—*Arana Antiqua*, p. 351

* A very suggestive note on this question is to be found in Huen Tsang "Après la mort du roi: Kia-ni-se kia (Kanushka), la race des Ki-lo-to (Kirtiyas) s'arrogea encore la royauté, chassa les religieux et abolit la loi du Bouddha," p. 178. These kings are subsequently spoken of, in the text, as "cette race ignoble," p. 179. The commentator adds at p. 454, vol. ii. "Kirtiyas en Chinois *Ma-te* (hommes) *schéts*" (See also, p. 249) Hien-tsang, Paris edit. Cf. *śāla*, *ārita*, and *gupta* under the sense of "protected," in connexion with note †, p. 11 ante, and also Elliot's *Glossary*, vol. II, p. 281

† This monogram has a curious similitude to the old Egyptian symbol for the Bee  which, as M. Oppert has shown, was the sign royal in the Hieratic, the prototype of *sarru*,  of the inscription of Nebuchadnezzar at Borsippa *Journal Asiatique*, 1857, p. 143. See also *Journ. R. As. Soc.* vol. I. N.S. pp. 224, 482

‡ A similar aquatic monster may be seen below the feet of an ancient statue at Nongarh (6 miles S.S.E. of Jayanagar) "The statue is made of the red-spotted sandstone of the Sikri quarries near Mathorā."—Cunningham, *Arch. Report*, vol. III, p. 161.

No. 3. Gold. B. M.

Reverse.—King appareled in close-fitting native costume, with the Indian *dhottī*, armlets, bangles, &c., reserving unexhausted arrows for a retreating lion.

Legend.—म हराजाधिराज श्री

Ma há rājādhirāja Śrī.

Reverse.—The Goddess *Pārvatī* seated on a lion, with fillet, lotus flower, and the usual Scythian monogram.

Legend.—श्री सिङ्घविक्रम *Śrī Siṅha Vikrama*. "The Lion-hero."

No. 4. Gold. B. M.

Obverse.—A horse decked for the *Aṣvamedha* sacrifice.

Legend (restored).—नवजमधः राजधिराज पृथिवी जियत्य

Navajamadhaḥ Rājadhiraḥ Pṛithivī jiyatya.

Below the horse मे *se*.

Reverse.—A rayed female figure (*Pārvatī* ?) holding a *chaurī* or Yák's tail, ordinarily used as a fly-whisk in the train of royalty.

Legend.—अश्वमेध पराक्रमः *Aṣvamedha parākramah*. "The hero of the *Aṣvamedha*."

A recent contributor to the *Journal Asiatique*, has taken me to task for discovering any traces of Scythism in the Indian *Aṣvamedha* rite, and after other curious criticisms, intrenches himself in the direct assertion that "le cheval des sculptures est le cheval des légendes et du culte bráhmannique."*

To my apprehension the Indian Aryans have put on record, in their own Vedas, a much more mundane account of their notions of the *Aṣvamedha* sacrifice, which seems to have been little more to them than a religious feast, with all the sensual accessories of fat horse flesh, baked meats, aromas of cooking, with essays on the merits of skilful carving: descending at last into gross questions of skewers, and the stray remnants that adhere to the hands of the operators.†

Far different is the impression conveyed by what we can gather from the local conceptions of the *Aṣvamedha*; here the ideal seems to have been eminently Scythic, both in its inception and application; it was in effect a martial challenge which consisted in letting the *victim*, who was to crown the imperial triumph at the year's end, go free

* *Journ. Asiatique*, 1875, p. 126. Essai sur la légende du Buddha, par M. E. Senart. The passage to which the author takes exception is to be found in my article in the *Journ. As. Soc. Beng.* 1865, p. 57; it has been reproduced in my *Indian Weights*, p. 62.

† *Rig Veda*, ii. iii. *sūktas*, vi. vii., Wilson's *Translation*, vol. II. p. 112, and note a, p. 121, also Preface, p. xii.—xv.; Colebrooke's *Essays*, Prof. Cowell's edit., vol. I. pp. 50, 55, 56; *Asiatic Researches*, vol. III. p. 429; Max Müller's *Anc. Sanskrit Literature*, pp. 37, 46, 357, 533.

to wander at will over the face of the earth, its sponsor being bound to follow its hoofs, and to conquer or conciliate the occupiers of all "fresh fields and pastures new" his equine pioneer chose to fancy.* Surely such a prototype shadows forth more of the conditions of the life of desert communities of the horseman class, than of the surroundings of Aryan cattle-drivers, entangled in the narrow passes of the Himálaya, or dubiously skirting the southern base of the outer range towards the plains of India in straggling companies. The original germ and development of the contrasted heroic aspect almost declares itself in associations belonging to Nomadic tribes, among whom a steed captured in hostile forays, had so frequently to be traced from camp to camp and surrendered or fought for at last.

Of course the ultimate decision of this and many other international questions, must depend upon how much of the Turanian element we are to recognize as having existed amid the occupying prehistoric races of India; a subject far too large to be discussed with advantage in this place.

KUMÁRA GUPTA.

No. 5. Gold. B. M.

Obverse.—King standing to the left, the right hand is extended as if casting incense into the small Mithraic altar, of which traces can still be recognised. The king is girt with the *Akhaṇḍá* or Indian straight broad-sword. To the right the *Garuḍa* standard, to the left the initial letters of the name of Kumára, कु ए

Legend—गमवजित्य सुवरत कुमार

Reverse — *Párvatī* seated on a raised throne, below which are expanded the leaves of the lotus. In the right hand, the Grecian fillet, with the recognized Scythian monogram above the shoulder.

Legend—श्री कुमार गुप्त

Śrī Kumāra Gupta

MAHENDRA GUPTA

No II*. Gold, weight 125 5 grains. Marsden,† No. MLIX B. M

Obverse.—King on horseback, to the right, with nimbus, seemingly bare-headed, with long flowing curls.

Legend—महेन्द्र गुप्त

Mahendra Gupta.

* Wheeler's *Mahābhārata*, vol I. p 377 Prof Goldstücker has pointed out (in the *Westminster Review* or April 1863) that the passages here quoted belong to the more recent "Jaiminiya Asvamedha" See also Wheeler's *Rāmāyana*, pp. 10, &c.

† See also Princep's *Essays*, pl. XXIII. fig 30, vol I p. 367. See also varnānta, pl XXX figs. 3, 4, 5, *ibid.* and *Ariana Antiqua*, pl XVIII. figs 16, 17 No. 16, has देवजनत after the *Gupta*.

Reverse.—*Párvati*, seated on an Indian *Morhá*, feeding a peacock.

Legend.—अजित महेन्द्र *Ajita Mahendra*. "The unconquered king."

No. III*. Gold, weight 119 grains. B.M. (?)

This is another coin of some interest, which I doubtfully attribute to Mahendra Gupta. It may be described as follows :

Obverse.—Standing figure with spear and flowing pennons, trident, and small Mithraic altar. Outside the spear the letters म *Ma*. On the inside प *p*.
हे *he*

Reverse.—*Párvati* seated, with traces of the Greek ΑΡΔΟΧΡΟ.

NÁRA GUPTA.

No. IV*. Gold. *Ariana Antiqua*, Pl. XVIII. fig. 22.*

Obverse.—King standing to the front, with Garuḍa standard on the right, and bow in the left hand. Device similar to the designs of Samudra and Chandra Gupta's coins (*Ariana Antiqua*, XVIII. 7, 8, 9, 4, Marsden, No. ML. and MLVII.), but materially deteriorated in the artistic execution.

Legend, below the left arm.—ना *Ná*.

र *ra*.

At the foot गु *Gv*. Marginal legend?

Reverse.—The usual type of *Párvati* seated on lotus leaves to the front (disclosing greatly debased art.)

Legend, restored from other specimens.†—वालादित्य *Báladitya*.

THE SÁH KINGS OF SURÁSHTRA.

The history of the Sáh kings of Suráshtra is so interwoven with the progress and final supremacy of the Guptas, that we must devote full space to the consideration of their independent rise and advance to power—as well in regard to the monumental palæographic records, in which the western coast is so rich, as in respect to the Numismatic remains of the dynasty which equally preserve marked local characteristics, and disclose instructive indications of a source and derivation other than Indian.

The inscriptions claim priority in the order of arrangement. These commence with a group of representative mural tablets which repeat the name of the presumed founder of the Sáh family, *Nahapána*. I have transcribed the first of these records in full, as furnishing a specimen of the ordinary style and motive of this class of dedicatory

* I formerly had doubts about the due attribution of these coins ; but now that I have examined several specimens, I concur in General Cunningham's assignment.—*Bhilsa Topes*, p. 145. The marginal legend is there quoted as *Para-madhi Raja*.

† There are three specimens in the British Museum.

epigraphs, reducing the subsequent quotations to the bare enumeration of royal names or other material data. For the preliminary materials I am indebted to a paper by Professor Bandarkar, which was presented to the London Oriental Congress of 1874, and which is now in course of correction for the volume embodying their Proceedings

I.—Inscription of Nahapána in the Nâsik Caves.

(No 17 of Mr. West's facsimiles *)

"To the Perfect One! This cave and these small tanks were caused to be constructed on the mounts Trirâsmi in Govardhana, by the benevolent Ushavadâta, the son-in-law of King Kshaharâta Satrap Nahapána,† son of Dînika, who gave three hundred thousand cows, presented gold, and constructed flights of steps on the river Bârnâsâyâ, gave sixteen villages to gods and Brahmans, fed a hundred thousand Brahmans every year, provided (the means of marrying) eight wives for Brahmans at Prabhâsu‡ the holy place, constructed quadrangles, houses, and halting-places at Bharukachchha, Dasapura, Govardhana and Sorparaga; made gardens, tanks, and wells; charitably enabled men to cross Ibâ, Parâdâ, Damanâ, Tapî, Karabênâ, and Dâhunukâ by placing boats on them; constructed Dharmasâlas, and endowed places for the distribution of water, and gave capital worth a thousand for thirty-two Nâdhigeras for the Charanas and Parishads in Pinditakâvada, Govardhana, Suvarnamukha, Sorparaga, Râmatîrtha, and in the village of Nânagola. By the command of the Lord I went in the rainy season to Mâlâya to release Hirudha the Uttamabhadra. The Mâlâyas fled away at the sound (of our war music), and were all made subjects of the Khatrisas the Uttamabhadras. Thence I went to Poksharâpi, and there performed ablutions, and gave three thousand cows and a village."

Remarks.

"The first part of this inscription is in Sanskrit The latter part contains a mixture of Sanskrit and Prâkrit."

II.—Translation of Inscription No. 16 of Mr. West's facsimiles, Lines 1, 1

"To the Perfect One! This apartment is the benefaction of Dakhamitrâ, the daughter of King Kshaharâta Satrap Nahapána and wife of Ushavadâta, son of Dînika."

Continuation of Translation of No 16, Lines 3-6

"To the Perfect One! In the year 42, in the month of Vasâkha, the son of Dînika, and son-in-law of King Kshaharâta Satrap Nahapána, gave three thousand 3,000 to the priesthood from the four quarters residing in this cave, as capital for [providing] garments and kûsana. Out of this sum on 1,000 the interest is three-quarters of a

* Journ. Bom. Br. R. As. Soc. vol VII p 42

† "I think upon the whole this way of interpreting the expression is more in consonance with known facts than making Nahapána satrap of a king named Kshaharâta."

‡ "Prabhâsu, as Dr. Stevenson says, is a place near Pattan Somnath Bharukachchha is now known to be Broach Dasapura must be some place in Gujarât or in the Marathî country bordering on Gujarât. It occurs in Inscription No 1 of Mr. West's series Sorparaga is Supara near Bassin The Damanâ and Dâhanukâ must be rivers flowing into the sea at those places in the Tanna District. Tapî is well known The others I am not able to identify Râmatîrtha is, I am told, a small place near Supara Ushavadâta's charities do not seem to have gone further to the north than Gujarât, or further to the south than the northern district of the Puna zillah The expedition to the south described in the inscription was occasional, the object being to assist a friendly race of Kshatriyas" (Conf. Ind. Ant. vol III. pp 100, 214, 322, vol IV. p 282, Yule's Marco Polo, vol II. p. 353 —Damanâ is doubtless the Damanâ Gânga, and Dâhanukâ the river of Dehnu to the south of it —J. B.)

hundred [*i.e.* 75] Kārshāpanas. These Kārshāpanas bearing interest are not to be repaid. Out of this [sum] two thousand, which is the capital bearing an interest of one hundred Kārshāpanas is for garments. A capital of 8,000 Nāḍigeras was given in Kapurāhara and the village of Chikhalapādra."

Remarks.

"From this and No. 18 of the same series it appears clear that Ushavadāta left three thousand Kārshāpanas; two deposited with one body of weavers, bearing an interest of 100 Paḍikas or Kārshāpanas, from which chīvarikas or garments were to be provided, and one with another body of weavers, bearing an interest of 75 Paḍikas, out of which kuṣana was to be given. Lines 4 and 5 of this and 3 of No. 18 are thus consistent with each other.

We see from the above that the cave was dedicated to the use of mendicants in the year 42, and from No. 28 that Ushavadāta bestowed other charities in the years 41 and 40. What era these are to be referred to will be considered in the remarks."

III.—*Translation of No. 14 of Mr. West's series.*

1. Son-in-law of Satrap Nahapāna———t.
2. Usual deeds of Ushavadāta the Śaka.*
3. In Chechika, city of Dīhanukā, Kekāpura.
4. In each village, in Ujjayini,† Sikkā . . [eleven lines more].

* "This has been usually taken to be Śaka, as if there were no doubt about it, but it is not quite safe to do so in the mutilated state of the inscription.

† "This is not without doubt."

I quote Prof. Bandarkar's final summing up and the resulting conclusions, with a view of showing the difficulties which still environ the question of the Sāh dates. "In the first place we have the inscriptions of Ushavadāta, which mention a king of the name of Kshaharāta Nahapāna, who is also called Kshatrapa or Satrap. Kshaharāta looks very much like Khagārata, and the characters in these inscriptions occupy a midling position between those of No. 6 and No. 26. Kshaharāta Nahapāna therefore may well have been the founder of the dynasty that displaced the Śātavāhanas some time after Kṛishnarāja. And coins of a race of kings calling themselves *Kings* and *Kshatrapas* or *Satrapas* have been found in Gujārat and elsewhere, and amongst them one of Nahapāna himself. There are two inscriptions also in Gujārat, which mention some of these kings. Very likely therefore it was this dynasty that Gautamīputra displaced."

"These inferences would be rendered highly probable if what is known or believed with regard to the dates of these kings were made to harmonize with the similar information we have with regard to the dates of Kṛishnarāja and Gautamīputra. The coins of the Satrap or Sāh dynasty bear dates, but it is not known to what era they are to be referred. For the dates of the Śātavāhana kings the only authorities are the Purāṇas. Though there is no very satisfactory agreement amongst them as to the names and number of the individuals composing the dynasty, the period of its total duration, given by all, nearly corresponds. Starting from the date of Chandra-gupta Maurya, which is generally believed to be 315 B.C. and deducting 294, the number (Wilson's *Purāṇa*, chap. XXIV, book IV.) of years for which the intervening dynasties reigned, we have 21 B.C. as the date of the foundation of the Āndhrabhūtiya dynasty; and going on further in the same way we have 2 A.D. for Kṛishnarāja's accession; and 319 A.D. for that of Gautamīputra. Now if we take Nahapāna to be the founder of the Śaka era, and refer all the Sāh dates to that era, the information got from the caves and the inferences based on it are perfectly consistent with these dates. Nahapāna's career of conquest must have ended in A.D. 78, when the era began; and this agrees with what we have stated above that the Śātavāhanas were deprived of the province of Nāsik some time after Kṛishnarāja. In the same manner, if the statement that Gautamīputra exterminated the race of Khagārata is true, the last of the Sāh dates must come up near enough to 340 A.D., that being the date of Gautamīputra's death, or, the end of his reign. This last date, if the era is Śaka, is, according to Mr. Fergusson (*Journ. R. As. Soc.*, vol. IV., N.S.), 376, in which case it would not agree with the other; but there is a mistake here. Mr. Justice Newton, whom he follows, assigns 235

Other inscriptions of Nahapāna at Kārlen and Junir :—

The next palæographic reference to the Sāh kings is an elaborate but imperfectly-preserved recapitulation of the consecutive repairs of the dam or bridge which retained the waters of the Paleśani river. This document Mr. Burgess will give in full both in text and translation hereafter. I have merely to anticipate it by a brief quotation, with a view to secure the continuity of my serial evidence. which in this instance, however, is only important as confirmatory of a foregone date, already suggested by the coins. The greatest interest, to us Europeans, in this long detail of the fate and fortunes of the embankment, consists in the reference to its previous restoration by the agents of Chandra Gupta *Mauṛya*, our classical Sandroktopos, whose name appears on this single occasion in the whole range of Indian epigraphy. This public

A.D. (*Journ. Bom. Br. R. As. Soc.*, vol. IX p. 18) to Svāmī Rudra Sāh, the 25th in his list, on the supposition that the era is Vikrama's, whence it appears that he reigned the figure on the coin of that monarch = 291. But if we turn to the copies of the figures given by him at page 28, vol. VII *Journ. Bom. Br. R. As. Soc.*, we shall find that there must be some mistake as to the right-hand stroke on the mark for a hundred in the last of the three dates given under Svāmī Rudra Sāh. For the first of these = 234, the middle figure being the mark for 20, since the circle has one diameter (see the numerals in the Nāśik Cave Inscriptions, and my paper, p. 67, vol. X, *Journ. Bom. Br. R. As. Soc.*); the second 192, the mark for a hundred having no side stroke. It is impossible then that the king, whose date is 192, should be reigning in 291. It is extremely probable that this king, No. 18 in Mr. Newton's first list (*Journ. Bom. Br. R. As. Soc.* vol. VII), or No. III in his second (vol. IX), whose date appears thus to have been misread, is the same person as No. 12 in the former or No. 19 in the latter. For the name of the individual and that of the father is the same in both cases. There is only the prefix *vudma*, "lord," in the former, which makes no difference, and the date 192 in the one case and 197 in the other. The final date of the Sāhs, therefore, is that of No. 17 (p. 28, vol. VII. *Bom. Br. R. As. Soc.*), which is 250, for the figure resembling the letter *ṣ* as stands really for 50, as I have shown in my paper (p. 72, vol. X.

Bom. Br. R. As. Soc.) on the Valabhi dates. This date in the era of the Śaka kings is 323. About that time then, i.e. about nine years after his accession, the Sāhs must have been conquered by Gautamīputra. If, on the contrary, we should take the era to be Vikrama's, Nahapāna's date would be about 60 B.C., i.e. he reigned 62 years before Krishnarāja, which, it will be seen, does not agree with the evidence of the caves, the Śātavāhana dynasty having been in possession of Nāśik in A.D. 2. In the same manner, the final date, which, according to Mr. Newton and Mr. Ferguson, is 235 A.D. on the hypothesis that the era is Vikrama's but which really should be 196 A.D. in conformity with my reading of the dates, is so remote from Gautamīputra's, 319 A.D., that he can in no sense be said to have exterminated the "race of Khagārāta." The Vikrama era will, therefore, not do. The objection brought by Mr. Ferguson against the Śaka is that if the dates were referred to it, the Sāhs would overlap the Guptas by a considerable period. But this period has now been reduced to about ten years, the Guptas being supposed to have come into power in 319 A.D. And a difference of ten years in the uncertain condition of our chronology is almost nothing. Besides, there is nothing to show that the Guptas obtained possession of the countries over which the Sāhs ruled in 319, or immediately after. Thus the date 319-340 A.D. for Gautamīputra, and the Śaka era for the Sāh dates, alone appear to be consistent with what we find in the cave inscriptions about that monarch and the Śātavāhana dynasty. The dates in Ushabhadāta's inscriptions, therefore, viz., 42, 41, and 40, would be 120, 119, and 118 A.D. respectively."

hundred [*i.e.* 75] *Kārshāpaṇas*. These *Kārshāpaṇas* bearing interest are not to be repaid. Out of this [sum] two thousand, which is the capital bearing an interest of one hundred *Kārshāpaṇas* is for garments. A capital of 8,000 *Nāḍigeras* was given in *Kapurīhāra* and the village of *Chikhalapādra*."

Remarks.

"From this and No. 18 of the same series it appears clear that *Ushavadāta* left three thousand *Kārshāpaṇas*; two deposited with one body of weavers, bearing an interest of 100 *Paḍikas* or *Kārshāpaṇas*, from which *chīvarikas* or garments were to be provided, and one with another body of weavers, bearing an interest of 75 *Paḍikas*, out of which *kuṣana* was to be given. Lines 4 and 5 of this and 3 of No. 18 are thus consistent with each other.

We see from the above that the cave was dedicated to the use of mendicants in the year 42, and from No. 28 that *Ushavadāta* bestowed other charities in the years 41 and 40. What era these are to be referred to will be considered in the remarks."

A.D. (*Journ. Bom Br. R. As. Soc.*, vol. IX p 18) to Svāmī Rudra Sāh, the 25th in his list, on the supposition that the era is Vikrama's, whence it appears that he reals the figure on the coin of that monarch as 291. But if we turn to the copies of the figures given by him at page 28, vol. VII *Journ. Bom Br. R. As. Soc.*, we shall find that there must be some mistake as to the right-hand stroke on the mark for a hundred in the last of the three dates given under Svāmī Rudra Sāh. For the first of these is 234, the middle figure being the mark for 20, since the circle has one diameter (see the numerals in the Nāsk Cave Inscriptions, and my paper, p 67, vol. X, *Journ. Bom. Br. R. As. Soc.*), the second 192, the mark for a hundred having no side stroke. It is impossible then that the king, whose date is 192, should be reigning in 291. It is extremely probable that this king, No. 18 in Mr. Newton's first list (*Journ. Bom Br. R. As. Soc.* vol VII), or No III in his second (vol IX.), whose date appears thus to have been misread, is the same person as No. 12 in the former or No. 19 in the latter. For the name of the individual and that of the father is the same in both cases. There is only the prefix *svāmī*, "lord," in the former, which makes no difference, and the date 192 in the one case and 197 in the other. The final date of the Sāhs, therefore, is that of No. 17 (p. 28, vol. VII. *Bom. Br. R. As. Soc.*), which is 260, for the figure resembling the letter *ṣa* stands really for 50, as I have shown in my paper (p 72, vol. X.

Bom Br. R. As. Soc.) on the Valabhi dates: This date in the era of the Śaka kings is 329. About that time then, i.e. about nine years after his accession, the Sāhs must have been conquered by Gautamiputra. If, on the contrary, we should take the era to be Vikrama's, Nahapāna's date would be about 60 B.C., i.e. he reigned 62 years before Kṛishnarāja, which, it will be seen, does not agree with the evidence of the caves, the Śātavāhana dynasty having been in possession of Nāsk in A.D. 2. In the same manner, the final date, which, according to Mr. Newton and Mr. Ferguson, is 235 A.D. on the hypothesis that the era is Vikrama's but which really should be 196 A.D. in conformity with my reading of the dates, is so remote from Gautamiputra's, 319 A.D., that he can in no sense be said to have exterminated the "race of Khagārjita." The Vikrama era will, therefore, not do. The objection brought by Mr. Ferguson against the Śaka is that if the dates were referred to it, the Sāhs would overlap the Guptas by a considerable period. But this period has now been reduced to about ten years, the Guptas being supposed to have come into power in 319 A.D. And a difference of ten years in the uncertain condition of our chronology is almost nothing. Besides, there is nothing to show that the Guptas obtained possession of the countries over which the Sāhs ruled in 319, or immediately after. Thus the date 319-340 A.D. for Gautamiputra, and the Śaka era for the Sāh dates, alone appear to be consistent with what we find in the cave inscriptions about that monarch and the Śātavāhana dynasty. The dates in Ushavadi's inscriptions, therefore, viz., 42, 41, and 40, would be 120, 119, and 118 A.D. respectively."

recognition of his dominion amid the memorial records of the western coast is a new testimony to his influence in those quarters, of which we had already external evidence in his traditional treaties with Seleucus.* So also is there an importance in the distinct mention of his grandson Aśoka, whose *proper name* is elsewhere subdued under the *title* of *Devanampiya Piyadasi* throughout the entire series of religious manifestoes he set up in so many chance places over the broad continent of India: one transcript of which appears on the eastern face of this very rock, which, as has been seen, Nature had constituted as the ready-prepared proclamation stone of successive generations.

THE SĀH OR RUDRA DĀMA INSCRIPTION, JUNĀGAR.

"To the Perfect one! This Sudarśana lake, being from Garanagar (Girinagara) . . . to the foot . . . constructed in its length, breadth, and height of unbroken masonry," &c.

"This work gave way in the 72nd year . . . of *Rāja Mahākshatrapa Rudra Dāma*, whose name is oft repeated by the great, the grandson of *Mahākshatrapa Chastana* of well accepted (propitious) name. Afterwards (?) by the Maurya *Rājā Chandragupta* . . . his (governor?) *Syena Pushpagupta* of *Surāshṭra* (?) (*rāstiriya* only visible) caused to be made . . . and by the celebrated *Yavana Rājā* of *Aśoka* Maurya named *Tushaspa* having been repaired."

[The text then goes on to proclaim the glories of the king, the enemies he overcame, &c., and continues] "who himself acquired the title of *Mahākshatrapa*, who won, &c., . . . by this *Mahākshatrapa Rudra Dāma*," and concludes with his own account of his special work in the ultimate repair of the dam.†

The last inscription in this list, which I have to notice, is the brief record on the Jastan pillar, which proves to be purely genealogical—and would be otherwise immaterial were it not for its mention of the ancestral "*Chashtana*," whose name figures in such prominence in the initial order of the coin series.

INSCRIPTION AT JASTAN in the North of Kāthiāwār prānt.

"In the year 127 Bhādrapada (*month*) dark-half, 7th (*day*) of the moon, this Sātra (*tank*) of *Rājā Mahākshatrapa Bhadramukha Swāmī Rudra Sena*, the great-grandson of the son of *Rājā Mahākshatrapa Swāmī Chashtana*; the grandson of the son of *Rājā Ksh(atrapa) Swāmī Jayadāman*, the grandson of *Rājā Mahākshatrapa* *Rudra Dāmā*, (*son of*) *Rājā Mahākshatrapa Bhadra-Mukha Swāmī Rudra*. Of the son of *Supra Nāthaka* of *Mānasagotra*, the grandson of *Khara*, with brothers"‡

COINS OF THE ŚĀH KINGS.

Thus much for the inscription data, we must now fill in the canvas with the more expanded revelations of the coins. As I have not been able in the brief period which has chanced to intervene between the commencement of the present chapter and its call for the press, to re-examine the conflicting bearings of the evidence affecting the *domination* of the Śāhs, I content myself with reproducing the latest inferences of Mr. Newton, who from the first has exclusively devoted himself to the study of the Numismatic remains of this group of kings, and achieved a veritable specialité in this department. Though in making these quotations I must guard myself by saying that I by no means invariably concur in the interpretations or deductions of the author.

Mr. Newton, in one of his latest papers, has had to review, and in some cases to revise my own early contributions to this subject,* I am the more anxious therefore that he should be heard in his own words. He says in all frankness, "The arrangement (of the dates) having been thus discussed and fixed, there remains the determination of the era to which the dates on the Śāh coinage are to be referred. Professor Wilson, in his *Ariana Antiqua*, was able only to state the priority of the Śāhs to the Guptas, but he could not restrict the rule of the latter within smaller limits than 'from the second or third to the seventh century of our era.' Mr. Thomas in his article published in 1848, in the XII. vol. of the *Journ. R. As. Soc.* (to which I have been, in many respects, much indebted), being compelled by the supposition, then entertained, that the first numerals on all the Śāh coins represented 300, was led to reject eras, which would otherwise doubtless have appeared preferable, and to select that of Śrī Harsha, dating 457 B.C., made known to us by Albirūnī, as the one which seemed best to meet the apparent requirements of the case. . . . Mr. Thomas thus placed the Śāh dynasty between about 270 and 50 B.C., and Mr. Prinsep placed the last member of the series in 153 B.C. The initial numerals being now read as 100 and 200, the era of Vikramāditya at once suggests itself as the one to be preferred."†

Proceeding upon these principles Mr. Newton subsequently framed the subjoined list of the Śāh kings, in which he was able to insert the names of six newly identified monarchs.

1. Nahapāna, B.C. 60 or 70.
2. The unknown King whose coin is given as figure 10 of the plate (p. 4, *Journ. Bom. Br. R. As. Soc.* vol. IX.)
- 3 (Syamo?) tika.
4. Chashāna, son of Syamotika, B.C. 10 or 20
5. Jaya Dāmā, son of Chastana.
6. Jiva Dāmā, son of (Dāmā?) Śrī, A.D. 38.
7. Rudra Dāmā, son of Jaya Dāmā.
8. Rudra Sinha, son of Rudra Dāmā, A.D. 45-47
- Rudra Śāh, son of Rudra Sinha.

* *Journ. R. As. Soc.* vol. XII, 1848, p. 32

† *Journ. Bom. Br. R. As. Soc.* 1862, p. 30

10. Śrī Sāh, son of Rudra Sāh.
11. Sangha Dāmā, son of Rudra Sāh.
12. Dāmā Sāh, son of Rudra Sinha.
13. Yaśa Dāmā, son of Dāmā Sāh.
14. Damajata Śrī, son of Rudra Sāh, A.D. 97.
15. Vira Dāmā, son of Dāmā Sāh.
16. Iṣvara Datta.
17. Vijaya Sāh, son of Dāmā Sāh, A.D. 115.
18. Dāmajata Śrī, son of Dāmā Sāh.
19. Rudra Sāh, son of Rudra Dāmā, A.D. 131, 141.
20. Viśva Sinha, son of Rudra Sāh, A.D. 143.
21. Atrī Dāmā, son of Rudra Sāh, A.D. 153, 157.
22. Viśva Sāh, son of Atrī Dāmā, A.D. 160, 168.
23. Rudra Sinha, son of Svāmī Jīva Dāmā, A.D. 173 or 213.
24. Yaśa Dāmā, son of Rudra Sāh.
25. Svāmī Rudra Sāh, son of Svāmī Rudra Dāmā, A.D. 223, 235.
26. Svāmī Rudra Sāh, son of Svāmī Satya Sāh.*

I shall reserve any comments or observations upon the still vexed subject of the era to which these coin-dates belong, till I come to compare the entire range of recorded time-marks supplied by the more recent archaeological discoveries; but I may remark, parenthetically, that the A.D. 235 of the twenty-fifth king in the above list, comes into conflict with the age I am disposed to assign to the Guptas under the Śaka test.

As to the correction in regard to the increase of the values of the sign for hundreds by the addition of side strokes, I long ago arrived at a similar conclusion, having, indeed, myself first suggested the probability of such a method of augmentation which the materials available in 1848 did not suffice definitively to establish.†

* "The inscriptions do not tell us that Nahapāna had a son, and I have not inserted the name of his son-in-law as he is not shown to have succeeded to the sovereignty. For the same reason I have omitted the name of Chastana's father. It is given on the coin, but we do not know that he reigned. Though no coin intermediate between Nahapāna and Chastana has yet been found, I am sure that several years intervened between them. The difference of type and execution observable between their coins is certainly greater than that which exists between that of the former and the coins of the Indo-Bactrians. I have, therefore, adopted a longer interval, and hope that coins of at least two or three kings between Nahapāna and Chastana may yet be found. It does not appear that Nahapāna's or Chastana's coin bore a date, and it is almost certain that none was marked on the copper coin of Jaya Dāmā. If the interval which I have placed between Nahapāna and Chastana and the reigns which I have assigned to Chastana and Jaya Dāmā be considered too long, I should be led to shorten these rather by assigning to them and all the subsequent sovereigns of the Sāh series earlier dates than by bringing down Nahapāna to a time further removed from the Indo-Bactrians.

† "I see no reason to modify in any respect the results arrived at in my paper of 1862 as to the succession of the Guptas to the Sāhs, the Valabhi kings to the Guptas, and the Indo-Sassanians to the Valabhi line.

"The limits of the Gujrat sovereignty in Nahapāna's time must now be extended beyond the territories which I was enabled in the paper above referred to to assign to the dominion of the Sāhs. The extent, however, of the districts held in subjection probably varied from reign to reign."

THE SĀH KINGS OF SURASHTRA.

NAHAPANA.

No. 6. Silver; weight 31 gr. *Unique*, trilingual. MR. NEWTON.*

OBVERSE.—King's head to the right, with rough hair bound with a fillet. Very coarsely executed.

Legend, imperfect Greek.—*PO*PANN

REVERSE.—A crude spear, with an axe on the side,† and an Indian definition of a thunderbolt?

Legend, in BACTRIAN-Pāli characters, reading from the right, commencing below the point of the spear, נהפנא NAHAPANASA, following which, reading from the inside, but in the reverse direction, in INDIAN-Pāli letters, नहपनस Nahapanasa

The engraver or designer of this die was evidently more conversant with the outlines of the Bactrian alphabet than he was with the forms of the character of the concurrent system of writing of Indian origin ‡. The repetition of the letters of the name of the King in the latter alphabet, retain so much of the appearance of Bactrian writing, that at first, I imagined the line of the legend followed uniformly on to the left of the Semitic version of the leading name; whereas there is an obvious break in the continuity of the legend, and a complete reversal of the run of the alphabetical signs, a system

* Mr. Newton's description of this coin is to be found in Mr. Burgess's text, p. 16

† The custom of placing the axe half way down the staff was common with the Indo-Scythians, see Kadphises series, *Arana Antiqua*, pl. X figs. 12-21., and pl. XXI fig. 19 Prinsep's *Essays*, pl. VIII, &c

‡ Mr. Burnell, in his elaborate review of "South-Indian Palaeography" (Mangalore, 1874), has naturally had to refer to the earlier types of the alphabets of Northern India, regarding which our views to some extent differ. The author has quoted certain passages from a foot-note of mine, published in the Vth volume of the *Journal of the Royal Asiatic Society*, N S, p. 420. This is not the place to enlarge upon subordinate transitions of alphabets extending over some centuries, but I wish to explain, in reply to Mr. Burnell's queries, that my inference regarding the Turanian or quasi-Dravidian origin of the *lāt* character of Aśoka's inscriptions does not imply a copying or imitation of any given Tamil alphabet, and far less so of the modern form now current, my object in giving the series of the *romanized* letters of that alphabet was merely to show what letters were required, and what were not required, to express one group of Dravidian languages. I estimate Mr. Burnell's services to the cause of Indian archaeology so highly that I trust he will do me the honour to read what I have elsewhere written upon these subjects, when he may discover how little we really disagree on most points, though I certainly should object to the evidence of Aśoka's monuments, as found in two separate sets of characters of 250 B C, being tied by the test of the *Vajjilettu*, in which the author detects "most points of resemblance to the Sassanian of the Inscriptions" [of A D 226-384] (p. 41)

As I write a curious item of testimony as to the guiding and aliding influence of the old Aśoka letters comes to us from Ceylon in the letter on Dr. Goldschmidt's report on the "North Central Inscriptions" of that island, published in the *Academy* of 20th November 1875, in which he says, "by finding the links between the old Indian [*i.e.* Aśoka *lāt*] alphabet and the modern Sinhalese, I was enabled, after a short time, to decipher inscriptions of all ages"

The only letters which strike the eye, at the first glance, are ANN above the king's head in No 7, and in the same position in No. 6, we can trace in coarser outlines the forms of PANN and a possible T before the P. Reverting again to No 7, as exhibiting the best cut characters though they depart more obviously from normal Greek forms, we have a suggestive O after the second N, but the concluding letter or letters are only vaguely preserved in either specimen. The next point to determine is whether the legend should be assumed to run round the central device in one uniform line, as is the exceptional case in some of the Bactrian coins,* or whether we should look for a break in the continuity, consequent on the insertion of the King's name at the foot of the bust, which is the more constant rule in the Greco-Bactrian currencies.

The balance of evidence—apart from the reverse coincident testimony—would preferentially lead to the latter conclusion. The opening N in the name of *Nahapana* is sufficiently pronounced in its top lines under such conditions; but what then is to be said of the prefix to the possible *ruparwa* representing in space 6 or 7 letters, and what is to be understood to follow that title to the right in the circular legend? These are, perhaps, questions that had better be left for future solution under the auspices of better numismatic specimens, but thus much may be indicated from the struggling letters which seem to complete the list of titles that they may possibly represent in a degraded form ΣPATIXIOT for *σπαρτιάς*, or, assuming a still greater failing in the local definition of the Greek alphabet, a more directly imperfect rendering of the title of ΒΑΣΙΛΕΥΣ which commends itself under a closer examination of the prominent letter X which may easily be reduced to an MS. Greek λ.

An important branch of the general inquiry here presents itself as to the course and survival of the Greek alphabet in India, which followed the conquering progress of the Bactrian Hellenes, as the affiliated alphabet of Semitic origin attended the more complete domestication of the Aryan races. The accessory incidents differed, however, in this respect, that the Greek language was reserved more exclusively for the ruling classes during their ephemeral sway, though its literal system was preserved in a degraded form, obviously beyond the duration of the currency of the Semito-Aryan character. Its geographical extension may be defined as nearly parallel to that of the Aryan writing towards the Gangetic provinces, while it penetrated in a comparatively independent identity to the Western coast. It is singular that there is no trace of any solitary inscription in the Greek language in India, which might, however, easily be accounted for; but, in its numismatic form it remained the leading vehicle of official record, with a subsidiary vernacular translation, during more than two centuries under Greek and Scythian auspices. It was similarly employed in conjunction with Aryan legends by the Kadphises Indo-Scythians (*Ariana Antiqua*, pl. X figs 5, *et seq.*), while the Kanerki Horde used it solely and exclusively in the definition of their barbarous titles (*Ariana Antiqua*, pls XII., XIII., and XIV.) The gold coins of the latter merge into those of our Guptas, but the degraded Greek, as we have seen, gives place to a cultivated type of Indian-Pāli letters.

Alexander's (Greek) colonies settled in India must have been both numerous and important, if as Arrian (Justin, xiii. iv) and Orosius (iii. c.) declare they were erected

* Antimachus, *Ariana Antiqua*, plate II fig. 15; Menander, do, plate IV. fig. 1, Apollodotus, do, plate IV. fig. 15, *Prinsep's Essays*, plates XIV. fig. 1; XV. fig. 3.

Could we rely upon the statements of Apollonius of Tyana, they would carry us still further towards the proof of the extended currency and survival of the Greek language in India up to A.D. 50. We are supposed to discover Phraotes, king of Taxila, conversing fluently in that tongue, and Iarchus, chief of the Sophoi, is said to welcome his visitor "in Greek;" in like manner certain villagers are reported conventionally, and without effort, or pretence, to have used that form of speech. (*Journ. R. As. Soc.* vol. XVII, pp. 78, 81, 90) This might perchance explain the unusual occurrence of so many numismatic examples of legends couched in current-hand Greek letters as opposed to the ordinary or what we term uncial capitals of monumental Greek, which gradually fell out of use about this period (*Ariana Antiqua*, Pl. XIV., figs 12, 13), and finally merged into the unintelligible jumble of other Scythic examples discovered on Nos. 16 and 17 of the same plate.

If the decipherment of the four most prominent letters "PANN" of the Greek legends in the allied coins of Nahapana and Chashtana proves correct, it may open out several new lines of inquiry as to the status and position of Chashtana and his contemporaries; and in the enlarged numismatic associations, establish connecting links, both epochal and geographical, that we have hitherto scarcely dared to speculate upon.

A short time ago Mr. Percy Gardner, of the B.M., published a representative coin of a Saka king named "Heraüs," of which the following wood-cut is a fac-simile, with his appended description, originally printed in the *Numismatic Chronicle*.

HERAÜS, SAKA KING.

No. IV.* Silver. B.M.

OBVERSE—"Bust of a king, right, diademed and draped; border of reels and beads

REVERSE.—ΤΤΙΑΝΝΟΥΝΤΟΣ ΗΙΑΟΥ

ΣΑΚΑ

ΚΟΙΙΑΝΟΥ.

(Τουαννουντος Ηρας Σακα κοιανου)

A king, right, on horseback; behind, NIKÉ, crowning him **

The assignment of this piece to Heraüs has been objected to by General Cunningham, who claims its attribution to the well-known king "Mauas," whose coins cover a large range both in number and variety of types.† It is quite true that the

* *Numismatic Chronicle* (1874), XIV, N S ¶ 161.

† General Cunningham reads the name as ΗΙΑΟΥ ΚΟΙΙΑΝΟΥ. See also *Numismatic Chronicle*, ¶ 109.

It is in regard to the typical details, however, that the contrast between the pieces of Maṇas and Hērāus is most apparent. Maṇas has no coins with his own bust among the infinite variety of his mint devices; nor has Azas, who imitates so many of his emblems. But, in the Gondophares group, we meet again with busts and uncovered heads, the hair being simply bound by a fillet, in which arrangement of the head-dress Pakores, with his bushy curls, follows suit. But the crucial typical test is furnished by the small figure of victory crowning the horseman on the reverse, which is so special a characteristic of the Parthian die illustration.

We have frequent examples of Angels or types of victory extending regal fillets in the Bactrian series, but these figures constitute as a rule the main device of the reverse, and are not subordinated into a corner, as in the Parthian system. The first appearance of the fillet in direct connexion with the king's head in the Imperial series, occurs on the coins of Arsaces XIV., *Orodes*,* (B.C. 54-37), where the crown is borne by an eagle,† but on the reverses of the copper coinage, this duty is already confided to the winged figure of Victory.‡ Arsaces XV., Phrahates IV. (37 B.C.-4 A.D.), continues the eagles for a time, but progresses into single and finally into double figures of Victory eager to crown him,§ Henceforth these winged adjuncts are discontinued, so that, if we are to seek for the prototype of the Hērāus coin amid Imperial Arsacidan models, we are closely limited in point of antiquity, though the possibly deferred adoption may be less susceptible of proof.

Supposing this adoption, however, to have been contemporaneous, the dates B.C. 87 to A.D. 4 will mark the age of Hērāus, whereas Moas is speculatively assigned to a much earlier period.** But we must await the authoritative determination of many international complications in the annals of Western Asia before we can venture to draw definite inferences from the typical devices of the border-land of India.

I feel that no apology is needed for still further breaking the continuity of the leading subject of this paper by the introduction of a rare and important class of coins, which appear, in a measure, to be connected with the unique piece of Hērāus, while their Parthian peculiarities are associated with seemingly Indian forms of costume, which our friends in the Western Presidency may perchance identify, and further secure new numismatic specimens to aid a final decipherment. Though Russia has hitherto contributed the best of our examples,†† several have been traced to the lines of the Lower

* I see that the French numismatists quote the coins of Pacorus I (joint king under his father Orodes I), which follow western models. These coins exhibit the figure of Victory.

"A juger d'après le type de ces monnaies je serais tenté de les attribuer à quelque roi indo-scythie, mais cette supposition me semble être revêquie en doute par une autre trouvaille (faite en 1851 dans la même contrée) qui outre une monnaie du même genre contenant quelques monnaies antiques (du VI^e siècle) et des monnaies

symbol of Muhammad bin Kásim's first Arabian settlement on the banks of the Lower Indus.

No. V.* *Silver. MUSÉE ASIATIQUE, ST. PETERSBOURG.*

There is little or no trace of pure Parthianism in these devices, except in the peculiar tooling of the neck ornament.* The obverse head would almost seem to represent a young Indian-born Greek, who was so far reconciled to local customs as to cultivate with shaven cheeks a small moustache, and to recognise the manifest advantage of a turband. The eccentric eagle crowning the rider on the reverse may, possibly, imply a newly erected kingdom, or a more moderate extension of ancient boundaries.

The free action of the horse recalls the attitude of the front charger of the classic *Dioscuri* of Eucratides, or the single light horseman of the Baktrian Philoxenes;† but, here, the huntsman supplants the warrior, and the seat and saddle, and even the horse itself, if truly designed, are Indian, in ideal and execution, rather than imitations of Greek designs. The dog (if such it be)‡ is, also, an innovation upon any hitherto recognised medallio device. The use of the distinctive adjunct of the eagle placing a chaplet on the king's brow, as we have seen, was derived, in the first instance, by the Parthians from Roman teachings; it appears on the coins of Phraates IV. and Tridates II. (B.C. 37),§ but soon gives way to the more natural winged figure of victory. The legend on the obverse I am as yet unable to decipher, but I must add, that I have neither seen this particular coin, nor even obtained rubbings or impressions of it. The curious ornamental scroll over the crupper of the horse has been read by my friends in St. Petersburg, who have sent me this wood-block, as the Arabic term *فخر* 'excellence, wisdom,' but, though such an interpretation might be put upon the letters as they appear in the wood-cut, I should not at present be disposed to concur in any such rendering, though I must confess that the word in front of the king's profile looks more like cursive and comparatively modern Sassanian Pehlvi than any other style of writing of which I have knowledge.

* The letters on the Parthian coins are what we should call nail-headed (not arrow-headed), i.e., the characters, instead of being cut out and sunk on the die, in continuous lines, are produced by a series of holes drilled in consecutive order upon the general outline of the letter, and connected more or less clearly by minor attaching links. On the coin itself these studs stand up like the nail-heads on a well-made mediæval chair. A

crenulent in front of the head-dress, which, though essentially Sassanian, was not exclusively so, as the Guptas alike affected the symbol.*

One of the grounds for preferring the later date for these coins consists in the fact, that the similitudes of the wave of the curl and general arrangement of the crest are undoubtedly closer, and more marked between the comparatively subsequent Parthian issues of Pacorus II.† and Vologeses IV. (A.D. 148-190),‡ than those of the primary patterns employed by Phraates II. and Sanatruces; and the elegant leaf-scroll, pendant from the Indian turband of Nos. VI. and VII., finds a curious and almost exact counterpart in the ornamental fall at the back of the Parthian tiara introduced by the same Vologeses IV.,§ and revived or retained in use by Vologeses VI.,|| and Artavasdes,¶ with whom the Arsacidan dynasty became finally extinct. But, here again, we must be cautious how we pronounce in favour of any definite period for these fashions, or pretend to determine priority of usage, which may have been dependent upon so many contrasted motives—old institutions, recent conquests, or pervading provincial designs, which would necessarily repeat themselves in the outlying portions of conterminous territories.

Nos. VII. VIII.* Silver. CABINET OF COMTE STROGANOFF.

The monogram, at the back of the horseman on the reverse, offers another instance of the strange modifications ancient devices were liable to be subjected to, in the hands of artists who, probably, did not comprehend the intent and meaning of the prototype. I have felt some diffidence in identifying the odd jumble of lines on No. V. as a reproduction of the Parthian eagle; but, in truth, the original designs on the Imperial mintages, did not contribute any very exact delineation of the form of the sacred bird, and the Indian copyist may have been even less instructed in ornithology and less conversant with the flight of eagles than the Western designers; while his own local imitators may well have failed to detect a likeness he himself was incompetent to give effect to. Be this as it may, the symbol or device on Nos. VI., VII., and VIII. has clearly arrived at the monogrammatic stage, though quaint traces of the bird's head are still to be detected on Nos. VI. and VII. The monogram, in its advanced form, is assimilated to several designs in established favour with neighbouring dynasties; in its lower limbs it singularly accords with the special symbols or crypto-monograms employed by Kadphuses, Kanerki and

Ooerki (Kanishka and Hovishka)*; while, in its central, upper portion it approaches nearer to the Indo-Sassanian typical design, which occupies the entire coin reverse, as depicted in pl. XVII. fig. 20 of Wilson's *Ariana Antiqua*,† and otherwise, in general characteristics, it has much identity with the ordinary mystic diagrams of the Sassanian seals ‡; but both these latter may merely represent continuous imitations or developments of an abiding ideal, furnishing a fixed point of departure, which, varied in its minor details, according to the ruling conceptions or acquired tendencies of the nation, under the religious teaching dominant at the moment.

No. IX.* Copper. Musée Asiatique, St. Pétersbourg.

The obverse head, in this instance shows a considerable amount of degradation, even from the imperfect models, which it clearly follows. The variation in the reverse device is of moment, not only as removing the mintage from any very close connexion with its predecessors, but as shadowing forth a possible change in locality. The symbol which occupies the field belongs to one of the many forms of the Indian *Trisula*, or trident, of *Śiva*,§ which crops up upon so many occasions amid the emblems of the East and the West, and which acquires an importance in the present inquiry, on account of the prominence similar devices will be seen to hold in collateral issues.||

Having completed the incidental references to the Numismatic devices, I have to encounter the more difficult task of explaining the purport of legends.

Those illiterate savages, the Parthians, finding themselves, amid the chances of conquest, so often domesticated as alien rulers; in the absence of any alphabet of their own, very wisely accepted the casual varieties of writing current in the localities in which they held sway. Among the leading and more important systems thus adopted the following may be enumerated:—

1. *Greek*, which was taken over as part and parcel of the Court and Official language, prevailing in the dominions of the Seleucidæ, about 255 B.C.
2. *Bactrian*, or the special adaptation of a normal Semitic alphabet for the

definition of an Aryan tongue, which was largely developed in India about B C 250, but which first appears upon Parthian coins, only in 110 B C

3. Various forms and modifications of Phœnician and Aramæan, employed on coins of an imitative type of the Tétradrachms of Euthydemus of Bactria (now assigned to Characene) of uncertain date; and other survivals of an old type of Syriac, such as that found on the coins of Edessa, and in allied branches of coinage of indeterminate locality.

4. The double alphabets of the ancient Pehlvi, discriminated as Chaldæan and Sassanian, which intrude among the Greek legends of the Imperial series so early as A.D. 2, and which finally supersede the Greek itself in the official records of Western Asia about the third century, A.D.

I release my Indian readers from the dry details of any attempted identification of the hybrid letters of which the coin legends V.-VIII. are composed, and simply say that I can only decipher with any pretence to certainty, the word *Marka*, for *Malka*, which commences in front of the head of the horseman, and is to be read from the *outside* of the piece. The succeeding letters seem to belong to a different alphabet, and the utmost I venture to guess at is something approaching the sounds of *Shahach* or *Shemach*,* on fig V., which interpretation, however, is seriously shaken by the almost modern Arabic style of the letters on VI., VII., and VIII., which might be taken for *لعبس* or *لعب*.

I now revert to the largely interrupted serial succession of the local Śāh kings of Surāshtra, of whose coins, however, I propose to give merely typical examples.

ĪṢWARADATTA

No. 8. Silver. B M.

OBVERSE.—The typical and “numismatically” *constant* Śāh head, in profile.

Legend, imperfect, with vague outlines of the Greek characters.—A C C I Y

REVERSE.—The conventional *Chaitya*.

Legend —राज्ञो महा चक्रवर्त्त ईश्वर दत्तस्य वर्ष प्रथमे.

Rājño mahā chakrapāṇa īśvara dattasa, varsha prathamē.

(*Tarsha prathamē*, in “the first year” of his reign ?)

It still continues an unexplained mystery, why the coins of the XVI king in Mr. Newton's serial list, p 29, should depart from the established custom of inserting a date at the commencement of the Greek legend, and supplant it by a new form of regnal date at the conclusion of the monarch's titles and designations in the *local* character on the *reverse*.

* *Chach* ? *حجاج* *صاحب* *مهرش*. Remond, *l'Inde*, pp 126, 147, 176; *Mas'andi*, vol. I p 342, *A'in-i-Akbari*, vol. II. p 146; Elliot's *Historians*, p 133 et seq. *Journ. R. As. Soc.* vol. XII. p 341.

VIJAYA SÁH.

No. 9. Silver. ROYAL ASIATIC SOCIETY. (Dates, according to local custom, 140 to 151.)

OBVERSE.—Sáh head as usual.

Greek legend, imperfect.— . . . ΙΙΒΙΙΙΟΙΙΕΥΑ

Date behind the head, expressed in ancient Indian *numeral figures*, following the initial J, 151. Confirmatory dates, 142 (Mr. Freeling's coin),* and 153 (B.M. coin).

REVERSE.—*Chaitya*, half-moon and a cluster of nine stars.

Legend.—राज्ञो महा चक्रपम विजय माहम राज्ञो महा चक्रपम दामा माहम पुत्रम.

Rājno mahá Kshatrapasa Vijaya Sáhata, Rājno mahá Kshatrapasa Dámá Sáhata putrasa.

DAMA JATA ŚRĪYAH.

No. 10. Silver. ROYAL ASIATIC SOCIETY.

OBVERSE.—The usual Sáh head.

Legend, illegible. Date, in ancient ciphers, 1*7.†

REVERSE.—*Chaitya*, half-moon and cluster of four stars.

Legend visible on this coin.— त्रिय राज्ञो मह चक्रपम दम

Full legend restored.—*Rājno mahá Kshatrapasa Dámá jata Śrīyah, Rājno mahá Kshatrapasa Dámá Sáhata-putrasa.*

KUMÁRA GUPTA.

Sauráshtran Series.

No. 11. Silver. MR. BURGESS.

OBVERSE.—The standard Sáh head, but much corrupted in the die execution.

REVERSE.—The goddess *Párvatī*, apparently imitated from the Eastern type of that deity, found on Kumára's gold coin, No. 5. Proving, in effect, the purport, hitherto unsuspected, of the original design, which is so strangely distorted in all other cotemporary issues. Cluster of six stars, as in the Sáh coins, but located in a new position in the lower portion of the field.

Legend.—परम भगवत महाराजधिराज श्री कुमर गुप्त महेंद्रदित्य

Parama Bhagavata Maharājadhīrāja Śrī Kumara Gupta Mahendraditya.

* Mr. Newton gives independent fac-similes of the dates 140 and 154, *Journ. Bom. Br. R. As. Soc.* vol. VII. p. 28.

† There is another doubtful date, of 1*4, on Dr. Stephenson's coin.

No. 12. Silver. MR. BURGESS.

OBVERSE.—The usual imitation of the typical Sâh profile.

REVERSE.—*Pârvatî*, one degree less recognisable than in No. 11. Cluster of six stars, in the old position, above and to the right of the central figure.

Legend as in No. 11. Legible portion.—*Parama Bhagavata Mîtha . . . 'hendra-ditya*.

No. 13. Silver. MR. BURGESS.

OBVERSE.—A totally new style of treatment of the typical Sâh head, shown in the sensual air, thick-necked profile, short curled moustache, and altered form of ear-ring.

Legend in barbarous Greek.—O NONO O, constituting a corrupt rendering of fragments of the standard Seythio legend of PAO NANO PAO. Our *Râo* of modern days, combined with the NANO, which is referred to the masculine moon, the associate of the Babylonian NANA, NANAIA. This may possibly suggest identities, more or less remote, with the Indian *Chandra Vanṣas* ?*

REVERSE.—*Pârvatî*, further degraded from the original type, but still freely identifiable. Cluster of eight stars.

Legend as in No. 11. Portion legible.—. . . *rama Bhagavata Maharájadhírāja Śrī Kumara Gupta* . . .

No. 14. Silver. MR. BURGESS.

OBVERSE.—The original Sâh head, but slightly modified in its details, and more closely adhering to the local prototype than the preceding examples.

Legend.—Traces of badly-formed Greek letters. The style of writing follows the unintelligible mechanical Sâh model more closely than the independently debased and free-hand Greek legend on No. 13.

REVERSE.—*Pârvatî*, degraded type; with cluster of six stars.

Legend, expressed in bolder Nāgarī letters than in the previous specimens. Portion of superscription visible — . . . *maha rájadhírāja Śrī Kumāra Gupta*

No. 15 Silver MR. BURGESS.

OBVERSE.—The Sâh head, debased in execution.

Legend, degraded Greek.—ONOU.

REVERSE.—*Pârvatî*, still less recognizable, but clearly following, *longo intervallo*, the established model. The cluster of stars is driven up, in the want of surface space, into the run of letters of the legend.

Legend, visible on the coin.—*Maharájadhírā . . Śrī Kumara Gupta*.

* Journ. R. As. Soc., vol. XII, p. 15; *Journal Asiatique*, 1839, p. 7; *Asiatick Antiqua*, pp. 358, 364. My *Ancient Indian Weights* (Marsden), p. 45. Certain gold coins were called, after the Greek name of NANO, in Sanskrit नाना, *Nānaka's*, described as coins with the mark of Śiva.

No. 16. Silver. MR. BURGESS.

OBVERSE.—Sáh head, further debased.

Legend.—UHOU (NANO).

REVERSE.—*Párvati* further disintegrated. The Sáh stars continue to find a refuge amid the ordinary course of letters of the superscription.

Legend, expressed in coarse ill-defined characters: visible on the coin.— . . .
jadhirája Śrī Kumara Gupta.

No. 17. Silver. Royal Asiatic Society. (Presented by the late RAO OF KUTCH.)

OBVERSE.—The Sáh head, finely rendered, with an air and suggestion of Greek art.

Legend.—ONO (NANO).

REVERSE.—*Párvati*, scarcely recognizable, though the execution of the die is otherwise sharp and unhesitating.

Legend, in bold, well-cut square characters.—

परम भगवत राजधिरा . श्री कुमार गुप्त . . अदित्य

Parama Bhagavata Rájadhirá(ja) Śrī Kumara Gupta (Mahe)ndraditya.

This piece represents a class of money of which we have absolutely multitudes of specimens,* it has been entered in the plate, to illustrate a well understood distinction from Nos. 11–16, indicated by the absence or omission of the quasi-superlative *Mahá* before the “*Rájadhirája*.”

The intention of this titular discrimination, as I understand it, was to mark the relative grades of Kumára's dignity; I suppose the class of coins of which No. 17 is the representative to have constituted the currencies of the Prince while acting as Viceroy on the part of his father in the Kingdom of Guzarát. He was then a “King over Kings,” but not a “Great King over Kings” as he became in later days on succeeding to his father's imperial throne and the position of Lord-paramount of India.†

* Journ. R. As. Soc., vol. XII. p. 65.

† Objection might be taken to this conclusion on the ground that the typical degradation of the central figure on the reverse in No. 17 is greater, and evidences a more distinct departure from the prototype than the device on the coin bearing the *imperial* prefix to Kumára's name. But the character of work of the No. 17 class is better as a rule, while more local in adhering to the Sáh model, than that of the coins with the improved definition of the figure of *Párvati*, which perhaps may have been entrusted to artists sent from the capital on the accession of the new Emperor, and who would have understood the intent and meaning of the device they had to execute better than the provincial die-cutters, who perhaps worked mechanically from their own anterior models. It will be noticed that the heads on the obverses of Nos. 11 and 13 follow different ideals, and are less finished than those on Nos. 10 and 17; and the style of the Greek character further marks a different school.

No. X.* Silver. MR. NEWTON.

OBSERVE.—

Reverse device similar to No. 18, Autotype Plate, and Bakra Gupta's coin, No. XI.* One of the most suggestive coins in the entire series emanating from the Western mints is the piece here reproduced, on wood, from Mr. Newton's original design given in his Plate, p. 3, *Journ. Bom. Br. R. As. Soc.* vol. VII.

The coin bears the conventional imitation of the Śāh profile, with the still clearly marked system of local dating so far as the position is concerned, commencing from the base of the skull on the left, and retaining the ordinary initial prefix of the *iota* (I), whose purport is as yet unfathomed; after this symbol, if originals and copies are not at fault, we encounter the distinct and universally accepted sign for 90 (Θ); following this, in the ordinary line of reading of the Greek legend, some vague outlines of a unit may be traced, which would still keep the date within the reasonable limits of Kumāra's succession, i.e. within the full hundred, or up to seven indeterminate years subsequent to the inscription date of 90 of his father Chandra Gupta II.

The given 90 or any number up to 99 may be tested by three different systems of interpretation; first, under the theory of the omission of *hundreds* seen in Bactrian and other examples, but alien to the ordinary course of Surāshtran definitions, second, under the supposition of a casual default in the expression of the sign for *hundreds*, and the implication of an immediate succession by Kumāra to Svāmī Rudra Śāh, who concludes the series of Śāh coin dates, in the numbers 290-292, expressed in the ciphers of their own system, which would, in so far, account for the consecutive appearance of the 90 *odd* on Kumāra's coin;* or, third, under the more satisfactory and conclusive inference that the number 90 had reference to the family system of dating already in use in the home dominions of the Guptas, which would curiously confirm many independent verifications of their epoch. It is, therefore, under this last head that I propose to class the formulated date in question. Thus, taking it in consecutive order with the 93 of Chandra Gupta II., Kumāra must have succeeded to the throne some time before 100 of his dynastic system of reckoning and assuming this to have followed the era of Śaka, about A.D. 179

No. XL* Silver. MR. NEWTON. (*Journ. Bom. Br. R. As. Soc.*) 1862, p. 3, Plate (un-numbered) Fig. 11.

OBSERVE.—A very straggling and chaotic outline of the Śāh profile, its defects are apparently less attributable to the ineffectual efforts of the modern native copyist than to the faulty dies of the ancient mints.

REVERSE.—The device shown in the accompanying wood-cut, which has been copied implicitly by Mr. Adeney from the original in the Bombay lithograph.

* Mr. Newton apparently advocated this view of the question (*Journ. Bom. Br. R. As. Soc.*, vol. VIII p. 10), though he was quite clear about the absence of any cipher before the 90, and recognized the I, or, as he calls it, the "figure which appears to be a mint mark, commonly found on the Śāh coins."

Legend.—Mr. Newton, who had the original piece before him, confidently transcribed the characters as *Parama bhagarata (rājādhirājā) Śrī Kumāra Gupta Mahendrasya*. The Kumāra Gupta is clear in the wood-cut, but the device separates the piece from the ordinary issues of that King.

BAKRA GUPTA.*

No. XII.* Silver. MR. NEWTON.

OBVERSE.—Śāh head but slightly varied, and still retaining the conventional ornamental collar.

Legend.—Traces of NANO.

REVERSE.—Pārvati, not far removed from the type shown in No. 15 of the accompanying Autotype Plate. Cluster of seven stars.

Legend.—परम . . . राजधिराज श्री वक्र गुप्त विक्रमादित्य

Parama . . . rājādhirāja Śrī Bakra Gupta Vikramāditya.

SKANDA GUPTA.

Surāshtran Series.

No. 18. Silver. ROYAL ASIATIC SOCIETY.†

OBVERSE.—The typical Śāh head, greatly debased.

REVERSE.—Pārvati reduced to fragmentary lines and dots.

Legend, in full, restored from better specimens—

परम भगवत श्री स्कन्द गुप्त क्रमादित्य

Parama Bhagarata Śrī Skanda Gupta kramāditya.

Visible on this coin, *Parama . . . Śrī Skanda Gupta kramāditya.*

No. 19. Silver; double struck. ROYAL ASIATIC SOCIETY.‡

OBVERSE.—The Śāh head, obscured by the second impression of the die.

Legend.—Traces of NANO.

REVERSE.—Figure of Śiva's Bull, *Nandī*, recumbent.

Legend, restored.—परम भगवत श्री स्कन्द गुप्त क्रमादित्य

Parama Bhagarata Śrī Skanda Gupta kramāditya.

Legible of the first die impression, *Bhagarata Śrī Skanda Gupta kramāditya.*

Traces of the second or superstruck die, . . . ya par . . .

* Published by Mr. Newton, *Journ. Bom. Br. R. As. Soc.*, 1862, p. 11. The coin is stated to have been found in company with a collection of pieces of Kumāra Gupta.

† Engraved as No. 20, pl. XV., *Ariana Antiqua*. So unintelligible was the device, that Pārvati was placed, both by the author and the engraver, upside down.

‡ See also engravings of this coin in *Journ. R. As. Soc.*, vol. XII. pl. II. fig. 45, p. 66, and *Ariana Antiqua*, pl. XV. fig. 16.

No. 20. Silver. B. M.

Coin similar to the last.

Legible, on reverse of the original piece.—*Parama Bhagavata Śrī Śkanda Gupta.*

The recumbent Bull, *Nandi*, which figures on the reverses of these coins was adopted intact as the emblem of the succeeding dynasty of the Valabhis; hence we find it on the seals of the copper-plate grants of Śrī Dhara Sena* and Dhruva Sena,† which are further attested with the regal stamp of श्रीमहादेवः *Śrī Mahādēhah*, below the Bull.

No. 21. Silver. B. M.

OBVERSE.—The typical Śāh head, much debased.

Legend.—NAN . . . rve.

REVERSE.—A small Altar, which may be intended either for the Mithraic altar, figured on Nos 1 and 5 ante, or for the conventional shrine of the sacred Tūlī tree of the Hindūs.

Legend restored.—पद्म भगवत श्री स्कन्द गुप्त क्रमादित्य

Parama Bhagavata Śrī Śkanda Gupta kramāditya.

Legible on this specimen, *Parama Bhogava . Śkanda Gupta kramāditya.*

It is worthy of remark that this altar symbol, like the Bull of Skanda Gupta's other type of money (Nos. 19, 20), which passed on as the heritage of the Valabhis, is adopted by his Gurjjara successors as their distinctive emblem. It may be followed in its course on the copper-plate grants of PRASANTA-RĀGA, a monarch "devoted to the worship of the Sun," under the dates of 380 and 385 Saka.‡ The interpretation of the parallel dates by the Śaka-era test seems to be almost necessitated by the discovery of a later grant of 417, to which date the words *Śaka Nripa* are subjoined.§

ŚRĪ GUPTA.

No. XIII*. Silver. Weight, 31 grains. Mrs. FÆLLING. Unique.||

OBVERSE.—The original device of the Śāh head, closely approximating to the normal outline.

Legend, in imperfect Greek.— . . ΑCΙΟΙΟ . .

REVERSE.—The standard *Percell* device, deteriorated to the extent shown in the accompanying fac-simile, with the Śāh cluster of stars and associate half moon. 

Legend —Tentative reading —श्री द्धुपुत्रवक्रमरुख श्रीगुप्त

* *Journ. As. Soc. Beng.*, vol. IV pl XL p 486

† *Ibid.*, vol. VII. p 978; Prinsep's *Essays*, vol. I. pp. 257, 262.

‡ *Journ. R. As. Soc.*, N. S., vol. I. pp 262, &c

§ Inscription of Dadā, whose capital seems to have been Broach. *Journ. Bom. Br. R. As. Soc.*, 1871,

|| Prinsep's *Essays*, vol. II. p. 91.

I am afraid that we must reduce the pretensions of the *Śrī Gupta*, whose name appears on this unique coin, from the possible position of father of the family, down to a very minor and incidental succession to the later glories of his falling race. Whatever speculations may have been encouraged by the mere discovery of the name of *Śrī Gupta* must now give way to the stern determination of numismatic facts. Tried by such tests the *reverse* of our specimen sinks it into comparative obscurity and carries down, with its own typical degradation, the claims of the king who issued it.

KUMĀRA GUPTA.

Peacock types.

Nos. 22, 23. Silver. My Cabinet.

Obverse.—A localized and greatly debased imitation of the Śāh head, especially disfigured by the Oriental rendering of the almond eye.

Legend.—In this class of coins all pretence of copying or attempting to reproduce the imitative Greek legends is fairly abandoned.

But in lieu thereof we are presented with the far more definite record of the three-figured date transposed from the ordinary position behind the Śāh head, to the less contracted space in the field, in front of the profile. In these cases the use of the indigenous ciphers, each of which expressed its own *full* number, arranged in the same perpendicular order as the initials of the royal names on the gold coins (Nos. 5, &c.), has this advantage over any system of dating in figures dependent on relative position, that in broken sequences, so inevitable in hand-struck pieces, we can pick out the *hundreds*, *tens*, and *units*, with absolute certainty, and combine the general result from independent specimens, without being tied down to the proof of a continuous entry on any single coin.

Reverse.—An admirably executed figure of a Peacock with full front expanse of plumage. To the right, at the foot, a reduced cluster of three stars.

Legend.—देवं जयति विजितावनिरवनिपति कुमार गुप्त

Dev(ā) jayati vijitāvaniravani-pati(h) Kumāra Gupta.

"His Majesty, Kumāra Gupta, who has subdued the earth, rules." *

* When more fairly deciphered, these obscure legends will be seen to present but few difficulties. The lapidary inscriptions I have already proved that the Gupta artists indulged in faulty Sanskrit orthography as well as in grammatical errors, so I need not detain my readers by any comments upon minor imperfections, while the general sense of the legend remains sufficiently clear. I must mention that, in my Devanāgarī transcripts, I have adhered scrupulously to the original legends impressed upon the coins; the version in the Roman type has been corrected up to Sanskrit requirements, by Dr. Fitz-Edward Hall.

There is a supralinear यय (or possibly an म m) after the गुप्त on Skanda Gupta's coins, the use of which is not apparent, but which clearly takes the place of the final o in Kumāra's legends.

I may note that Kumāra Gupta's coins display both the old form of म m and the more specially Gupta outline of that character. (*Journ. As. Soc. Beng.* vol. IV. pl. XLIX., figs. 10 and 12.) The यय is also seen in its transition state from the triple-lined letter of early days to the almost modern form; while at times it appears, on Skanda's money, as a character not easily distinguishable from the later Kumāra म m just adverted to. This extensive modification of the यय in the numismatic alphabet, is the more curious, as the corresponding lapidary character retains all the essentials of its ancient outline throughout the Gupta inscriptions, from the Allabābād pillar to Budha Gupta's record at Eran; and even on to Toramāna's inscription at the same place.

The range of dates on this class of Kumāra coins is more complete in the units than in the tens. We have but a single example of the latter which, however, recurs frequently and constitutes unmistakably the 8, or casual likeness of that character, which stands for 20. The units for the numbers 1, 4, 8,* 9 and entered below the 8 are equally positive.

SKANDA GUPTA.

Nos. 21 and 25. My Cabinet.

OBVERSE.—Head as above. Traces of a date in front of the profile. The figure for 100 is quite plain and distinct on the original of No. 21.

REVERSE.—Peacock as above. The stars are omitted.

Legend.—विजितावनिर्वनिपति जयति देव स्कन्द गुप्त य
Vijitāvanir avanipati(h) jayati deva(h) Skanda Gupta-y

BUDHA GUPTA.

No. 26. Silver.

OBVERSE.—Head as above. Date in front of the profile, 155.†

REVERSE.—Peacock as in No. 25.

Legend.—देव जयति विजितावनिर्वनिपति श्री बुध गुप्तो
Dev(o) jayati vijitāvanir avanipati(h) Sri Budha Gupta

TORAMANA.

Nos 27 and 28. Silver. B. M.

a. Colonel BUSH's coin; b. Miss BARINO's late donation to the B. M.

OBVERSE.—Gupta head, facing to the left, thus marking an intentional modification of the conventional Gupta dies

Legend, in front of the profile, reading downwards, from the outside. 82 or rather 182, the figure for 100 is obliterated

REVERSE —Peacock as in the proper Gupta series, greatly debased in form and design.

Legend restored.—देव जयति विजितावनिर्वनिपति श्री तोरमण

Dev(jayita) vijitāvanir avanipati Sri Toramana.

* The 8 has not hitherto been quoted. It may be seen on one of the coins of Kumāra, in the Stacey Collection in the Museum of the Asiatic Society of Bengal. The same collection contributes the unique figure of 9

† The unit on the British Museum coin figured in my plate II. *Journ. R. As. Soc.*, vol. XII. No. 56, would seem to carry us on to 157.

BHATTARAKA KINGS.

Nos. 29, 30, 31. Debased silver. Mr. BURGESS.

OBERSE.—The Sáh head, but little modified.

REVERSE.—Fragmentary traces of the design exhibited in coin XI.* and in the wood-cut of the copper coin, No. XIV.*

Legend, partially restored.—राज्ञो मह क्षत्रपरस . . . कस महस . . भट्टरकस

Rajno Maha Kshatraparasa . . . Mahasa . . Bhattarakasa.

Nos. 32, 33. Copper.

OBERSE.—Sáh head.

REVERSE.—The combined form of the bow and trident, greatly obscured.

Legend. As in No. 29.

No. XIV.* Copper. Weight, 12 grains.

OBERSE.—Humped Bull to the left, with a dotted circle.

REVERSE.—Strung and drawn bow, with arrow projecting into a curved trident, of which it forms the central prong.

This little mite of copper proves to be worth far more than its weight in gold, for the light it throws upon the primary design of the hitherto incomprehensible device on the class of Suráshtran coins Nos. 29-33. But far beyond the mere mechanical identification of an obscure symbol is its value, in the historical sense, in the link it establishes between the Guptas, or their immediate successors, and the proximately contemporary dynasty of the nine Nágas, adverted to the quotation from the *Vishnu-Purána* (p. 11 ante).

The reverse devices of the Gupta Suráshtran coins have already exercised our conjectures: the Párvatí solution, in the one case, was as unexpected as the discovery of the prototype of the device of No. 29 in the simple bow and arrow combination with Śiva's trident, disclosed in the wood-cut.

Many and various have been the guesses as to the purport of this combination of lines on these coins. My latest impressions were in favour of a crude copy of the figure of "Minerva Promachos" of the currencies of Apollodotus and Menander, which entered so largely into the circulating media of Western India, the degraded types of which would almost have justified any shortcomings on the part of native imitators. Looking at the autotype reproductions of Nos. 30, 31, 32, 33, from the top of the page, the flowing garments and the extended shield readily suggest themselves; but now we discover, under the teaching of the independent home device, that the triśula or special emblem of Śiva, whose worship is so distinctly to be traced by independent testimony, constituted the banner of the Bhattarakas, and Minerva's shield subsides into the light

battle-axe of the Scythians, which is preserved in its form and relative position on the staff of so many village weapons of Northern India to this day.*

The Numismatic identifications of the currencies of the Nāgas have been followed out in detail, in General Cunningham's later Archaeological Reports; it will be sufficient for my present purpose, to append his remarks in a foot note.† Merely premising that the connection between the Nāgas and the Western successors of the Guptas is indicated in the identity of the outline of the Bull on coins Nos. XIV *, XV. *, and that the

* The presence of the trisula or trident is an indication of the adoption of the worship of Śiva, and the trident, it may be remarked, is combined with an axe on one side of the staff like the tridents in Barabhat and Gopaswara.—*Journ. As. Soc. Beng.* 1836, p. 495, H. H. Wilson, *Ariana Antiqua*, p. 350, pl. X, figs 12-21, pl. XXI fig. 19, and Chandra Gupta coin, pl. XVIII fig. 10

Varieties of the *trishū, bālū*, or trident, continued to be emblematic on the coins of the first third of this century in Mathurā, Jalaor, Sāgar, Śrīnagar, Kālpī, &c.

Princep's *Essays*, "Useful Tablets," p. 67, pl. XLVI. figs. 42-46, *Journ. As. Soc. Beng.* 1834, pl. III, "Useful Tablets," p. 55

† "If I am right in the identification of Narwar with the Padmāvatī of the Purāṇas, we obtain one of the most interesting and important facts in ancient Indian history in fixing the actual locality of the kingdom of the nine Nāgas. The identification is strongly corroborated by the numerous coins of various Nāga kings which have been found at Narwar, Gwalior, and Mathurā, all of which have been described by me in the Journal of the Asiatic Society [*loc. cit.*]. It is further supported by a passage in the 18th line of the Allahābād pillar inscription of Samudra Gupta, in which the king boasts of the extent of his dominions, and enumerates the different princes and countries which had become subject to this power. Amongst the former he mentions *Ganapati-Nāga* as one of the tributary princes of Aryavartta. Now, *Ganapati* or *Ganendra* is the name of the Nāga Raja, whose coins are the most common and the most widely diffused of all these Narwar kings; and the legends of his coins are in the very same characters as those of the Gupta coins and inscriptions, it is certain that he must have been a contemporary of one of the princes of that dynasty. I think, therefore, that there is every probability in favour of the identity of the *Ganapati-Nāga* of the Narwar coins with the *Ganapati-Nāga* of Samudra's inscription. My discovery of an inscription of Samudra Gupta in Mathurā itself is sufficient to show that the Nāgas must have lost their dominion over that city at least as early as the reign of Samudra."

"The period to which the nine Nāgas must be assigned depends solely on the date of their contemporaries the Guptas, whose power became extinct in A. D. 319. If, therefore, we refer the rise of the Gupta dynasty to the Saka era, the date of Samudra Gupta will fall in the first half of the second century of the Christian era. But as in his reign the power of the Nāgas had already begun to decline, I think that the establishment of the Nāga dynasty may be fixed with some certainty about the beginning of the Christian era. According to this view, the rule of the nine Nāgas would have extended over the whole of the first and second centuries, or from A. D. 0 to 225. In the following list I have arranged the names of these Nāga Kings according to the devices of their coins, beginning with those types which seem to me to be the earliest on account of the more ancient appearance of their accompanying inscriptions. It is worthy of note, as corroborative of the date which I have assigned to the Nāgas, that the whole of the devices of their coins are to be found also on the silver coins of the Guptas themselves, or on those of their acknowledged contemporaries —"

No	A.D.	Names on Coins	Devices
I.	0	Bhīma Nāga - - - -	Powcock to the left.
II.	22	Kha* Nāga (* <i>Kharjura</i> , or <i>Kharpara</i>) - -	Ditto to the right
III.	50	Va* Nāga (* <i>Varma</i> , or <i>Vata</i>) - -	Ditto ditto

	225	Ditto - - - -	Trisula
		Close of the dynasty	

association of the Nāgas with the central Indian Guptas is more distinctly shown in the annexation by the latter of the typical Peacock of the first-named dynasty, who, singular to say, latterly abstained from its use, and adopted the new device of the Bull under Skanda Nāga.*

GANAPATI NAGA.

No. XV.* Copper. Weights (in full currency order) average 36·4, 18·2, 9·1 grains.† Prinsep's *Essays*, pl. VIII. fig. 9, pl. XXXIV. fig. 31, *Journ. As. Soc. Beng.*, 1834, pl. XXVI. fig. 9, 1865, pl. XVIII. figs. 7, 8, 9.

OBVERSE.—Bull, as in the coin above figured (No. XIV.*), with a margin of dotted lines of identical design.

REVERSE.—No devices. The field is filled in with the circular legend.

Legend restored.—अोगणपत्य

Śrī Gaṇapatya.

PAŚUPATI.

No. XVI.* a. Copper. Weight, 92 grains. Fig. 15, pl. XVIII., *Journ. As. Soc. Beng.* 1865, p. 115; and Prinsep's *Essays*, pl. XXVIII., fig. 23.

OBVERSE.—Figure of the King seated cross-legged in the Indian fashion, his right hand holding a flower, and his left resting on his hip; the whole surrounded by a circle of large dots.

REVERSE.—A vase surmounted by a crescent and star, or perhaps a flower, and enclosed in a circle of large dots.

Legend, in Gupta *Nāgarī* characters.—पशुपति

Paśupati.

No. XVII.* b. Copper. Weight, 92 grains. Fig 17, *ibid.*

OBVERSE.—A short trident or *trisul*, on a stand surrounded by a circle of small dots.

Legend in two lines.—प शु *Pa śu*

प ति *pa ti*

REVERSE.—The sun, with prominent rays surrounded by a dotted circle.

Legend as in Obverse.

"As the Nāgas would appear to have been tributary to the Guptas in the time of Samudra, I think it most probable that the kingdom or district of Narwar must have remained subject to them, until near the close of their dynasty, about A.D. 275, when their sovereignty to the south of the Jumna fell to Toramāṇa."

"Of Toramāṇa's dynasty we have two inscriptions, one of himself at Eran to the south of Narwar, and the other of his son Paśupati at Gwalior to the north of Narwar. From the relative positions of these inscriptions we may fairly infer that the intermediate country must also have belonged to the Toramāṇa dynasty. The date of Toramāṇa himself is fixed by Mr. Thomas on the authority of a silver coin to the year 180" [*proved* by the second example in the plate from, No. 28] "odd of the Gupta era, which referred to the initial year of Śaka would place him in A.D. 260. If, then, we allow twenty-five years to each generation, the reign of Toramāṇa will range from 260 to 285 A.D., and that of his son, Paśupati, from 285 to 310 A.D."

* *Journ. As. Soc. Beng.*, 1865, pl. XVIII. p. 120.

† These coins are common and abundant in the extreme. Colonel Stacy's collection alone contained no less than 3479 specimens; and General Cunningham mentions that he has acquired, at various times, many more than 3000."

RÉSUMÉ.

The description of the Gupta coinage, with its provincial ramifications, in unstinted array, has now been extended, far beyond my original design, in the previous pages.

The critical observer of my text will notice an apparent absence of method, leading me to expand on the one part and contract on the other the general scope of my annotations. These anomalies have been chiefly due to the uncertain demands of a printing office in England, and the irregular reception of editorial sanction from the Archaeological Surveyor of the Western Presidency, who is once again at his post, occupied with the duties of a new season's operations. Thus, as chance would have it, I have had ample opportunity of completing progressively certain minor details, but find myself limited in point of time, at the last moment; so that I have had to withdraw, perhaps, the most interesting chapter of the whole series, consisting of a comprehensive essay on the source, progress, and development of the ancient Indian numerals, as well as to defer a more complete review of Indian dates as rectified or confirmed by the numismatic evidence above submitted; so that I have had to reduce my recapitulation of the Gupta and other international dates to the abstract form embodied in the subjoined table, which however effectively combines most of the existing data available for the scrutiny and ultimate adjustment of independent commentators.

ABSTRACT OF THE RECORDED Gupta Dates.

Names of Kings.	Inscriptions	Coins	Tradition	Result, A. D. derived from the above list.	Remarks
1. Gupta -	-	-	-	-	-
2. Ghatot Kacba -	-	-	-	-	-
3. Chandra Gupta I. -	-	-	-	-	The first Mahāśādhvaja
4. Samudra Gupta -	-	-	-	161	-
5. Chandra Gupta II -	{ 82 93	-	Retained 22 years after the con- quest of Kushāna.	172	-
6. Kumāra Gupta -	{ 90 old 121 129	-	Retained 30 years.	? 200 208 209	Coin of Kumāra, No X *
7. Skanda Gupta -	{ 130 138 141 146	-	Retained 30 years. Sensipati Shastaraka, two years before Skanda's death.	217 220 223	-
8. Budha Gupta -	{ 165	155	-	234	-
Toramana -	-	182	-	244	-
Other local unrec- orded Gupta Kings.	-	-	-	261	-
Vallabhis -	-	-	-	319	The first even nominal Mahārāja in the irregular dynastic lists is the third Sensipati. The VIIth ruler, in the same order, seems to have been the earliest Monarch of any real pretensions.

COINS OF THE ARABS IN SIND.

Some of the less prominent examples among Mr. Burgess's recent acquisitions may possibly prove of more direct and immediate interest to Antiquarians in Western India, than the numismatic remains of unrecorded history with which we have hitherto been concerned.

The conquest of Sind by the Arabs, in A.H. 93 (A.D. 712), constitutes a marked epoch in the annals of the land, and is associated with many instructive coincidences—in its inception, in the domestication of the conquerors on an alien soil, and their abrupt disappearance into comparative obscurity.

The daring and chivalric advance of Muhammad bin Qásim, was freely backed by the encouragement and support of the celebrated Hijáj bin Yúsaf, who so completely reversed the Khalif 'Umar's policy of non-extension of the Muslim boundaries to the eastward.

It is curious to note the readiness with which the conquerors settled themselves as residents and the facile refuge this extreme corner of the Muhammadan world afforded to persecuted or heretical members of the new faith, while they retained among themselves so many of their ancient tribal divisions and jealousies; and it is instructive to follow the untold tale of ethnic subsidence and final absorption into the Indian native element, when the true Arab blood came to be exhausted by foreign admixture, as in other cases wherever the standard of the Prophet carried with it, the loose teachings of polygamy, beyond the nomadic tents of the desert.

The sole preface to such obscure investigations as the present must be gleaned from the casual contributions of Arabian writers to the annals of an outlying province, with which they were seldom brought in contact.

In the subjoined table of the Arab rulers of Sind, I have taken, as my leading authority, a writer, who seems to have had extensive and exceptional knowledge of his subject. This list was originally compiled from Reinaud's text and translation of *Belázari* for my edition of Prinsep's Essays, being further collated with Sir H. M. Elliott's excellent work on the Arabs in Sind, which has since been incorporated in his *Historians of India*, vol. I. p. 113.

The Native races regain possession of the soil.

In addition to the kingdoms of Manṣūrah and Multān there were other quasi independent governments at Bānīn, where 'Umar the son of 'Abdal 'Azīz *Habbārī* seems to have held sway,|| and at Kaṣḍār where the governor, in Ibn Haukal's time (A.D. 943) was Mu'in bin Ahmad.¶ But in all these cases, as indeed at Manṣūrah and Multān, the *Khutbah*, or public prayers, were read in the name of the Khalīf.

I have one remark to make with reference to the peculiarly local characteristics of the numismatic remains discovered by Mr. Bellasis near the old site of Brahmanabad and the identification of the new town of Manṣūrah, as tested by the produce of the inhumed habitations hitherto penetrated, in the fact of the very limited number of Hindū coins found among the multitudes of mediæval Muḥammadan pieces, and that the former, as a rule, seem to have been casual contributions from other provinces, of no individual uniformity or appearance of age such as should connect them with the ancient Hindū capital.**

* Transferred from Sind to Africa in A.H. 151 Renaud, p. 213

** The note which I compiled in 1858 to aid my first fragmentary description of the coins discovered by Mr. Bellasis at Brahmanābād, contains so many references that may prove useful to Antiquarians in Western India, that I have thought it advisable to correct and enlarge it, as far as possible, up to the requirements of the present day.

"Amrou, fils de Mohammed fils de Cassim fonda, en deçà du lac, une ville qu'il nomma Alman-soura. C'est la ville où résident maintenant les gouverneurs"—p. 120 In a previous passage, Balāzari tells us "Ensuite Mohammed fils de Cassim, se porta devant le vieil *Bahmanābād*, qui se trouvait à deux parages de Mansoura. Du reste Mansoura n'existait pas encore, et son emplacement actuel était alors un bourg . . . Mohammed plaça un lieutenant à *Bahmanābād*; mais aujourd'hui la ville est ruinée"—"Balāzari," Renaud, *Fragments Arabes et Persans relatifs à l'Inde*, Paris, 1845, pp. 198, 211. The Arabian author from whom these traditions are derived, محمد بن أحمد died in 279 A.H. (892 A.D.). See also Renaud quoting Albirūnī's "Tārīkh-i-Hind," *Fragments*, p. 113 Ibn Khurdādhbih (A.H. 260) *المسالك وممالك* text and translation by M. B. de Meynard, *Journal Asiatique*, 1865, pp. 277-8, 289, 292, &c Sir H. Elliot's MS. of Albirūnī's *Kānūn* has the following: *فهو من بني منصور بن قاتكها قال*—Jaubert, in his translation of Edrisi, on the authority of original MSS., states that the local native

of India, who established himself in Sind about 600 A.H. (1203-4 A.D.) to fall at last before the troops of the chivalric Jalāl-ud-dīn *Khārizmī*, who, in his turn had to swim the Indus for his life, before the hordes of Changī Khān.*

MUHAMMAD.

No. XXII. Copper. Size, 3.

A unique coin of apparently similar type, (though the obverse is, in this case, absolutely blank,) replaces the name of 'Abd-ul-rahman on the reverse by that of *محمد* Muhammad. The concluding tribal term seems to be identical with the designation embodied in the Kufic scroll at the foot of the reverse of No. XXI.

'ABDALLAH.

No. XXIII. Copper.

OBVERSE.—Device as in No. XXI. ('Abd-ul-rahman).

Legend : *محمد رسول الله* [عبدالله]

REVERSE.—Blank.

No. XXIV. Copper. Size, $3\frac{1}{2}$. Weight 18 grains.

OBVERSE.—Central device the conventional four-pointed star, as in No. XXI, around which, in a circular scroll, may be partially read the formula *لا اله الا الله وحده لا شريك له*.

REVERSE.—Central device composed of the name of *عبدالله Abd-allah*; the two portions *عبد* and *الله* being crossed at right angles, so as to form a *tughra* or monogrammic imitation of the outline of the star with four points of the obverse device.

The marginal legend is arranged in the form of a square, and consists of the words *محمد رسول الله* [الامير]

No. XXV. Silver. Size, 2. Weight, 8.4 grains.†

Palm branches, roses, stars, and all other mundane devices are rejected and replaced by simple Kufic legends, so cherished by severe Muhammadans, to the following effect :

OBVERSE.— *لا اله الا الله وحده لا شريك له*

REVERSE.— *محمد رسول الله الامير عبدالله*

No. XXVA. Copper, bearing similar legends. Other specimens vary in the division of the words, and omit the title of *Al-Amir*.

* Ilduz's special symbol was a "star" beneath the conventional figure of the Rājput horseman. See coin No. 24, p. 31, of *My Pathān Kings of Delhi*, Trübner, 1871. Kubāchah follows in the occasional use of the Star, No. 87, p. 101, *ibid.*; so also Muhammad bin Sām's own coin, No. 7. (Prinsep's *Essays*, pl. XXVI. fig. 45,) and Altamsh's coin, No. 48, continue to display the local device. The coins of Uzbek Pāi, the Indian General of Jalālud-dīn, Khārizmī struck at Multān, reproduce the identical cluster of the seven stars of the Sāh Kings, and the Guptas (plate VII. figs. 9-13 ante),—which discriminating mark survived, till lately, on the native currencies of Uḍipūr and Ujjain. *Pathān Kings of Delhi*, No. 85, p. 99; Prinsep's *Essays*, Useful Tables, No. 18, p. 67.

† Among the silver coins exhumed from the so-called Brāhmanābād, some are so minute as to weigh only 1.2 gr.

BANŪ-DĀUD. (Dāūd-putra's?)*

* Dāūd-putras, *Journ. R. As. Soc.*, vol. VII, p. 27.

of dominion in that province. Mas'auli VI. pp. 88, 91, 99, price II. pp. 2, 4

† I am inclined to identify this ruler with the *Abū Manẓar* Umar bin Abdallah, indicated in the general note p. 58 *ante*, as the reigning sovereign of Manṣūrah, in A.H. 300—, at the period of the geographer Masūd's visit to the valley of the Indus, and of whom he speaks further in the following terms:—"There is some relationship between the royal family of el-Manṣūrah and the family of el-Shawārib, the Kadī, *الأسود* *هيار بن* *الأسود* and have the name of Deni 'Amr ben 'Abd el-Azīz el-Karshī, *عبد العزيز القرشي* who is to be distinguished from 'Amr ben 'Abd el-Azīz ben Merwān, the Omīyādh (Khalīf) *سپرنجر's Meadow of Gold*, p. 385. The Arabic is from M. B. de Meynard's edition, p. 377. See also Gildemeister, quoting *Ibn Haukal*, p. 168, and Elliot, citing the same author (*Historians of India*), p. 63; and Professor Dawson's edition, vol. I pp. 21.

BANÉ 'UMAR.

No. XXX. Copper. Size, $4\frac{1}{2}$. Weight, 36 grains. Unique. Sir BARTLE FRERE.

OVERSE.—Central device, four lines crossing each other at a common centre, so as to form a species of star of eight points; four of these are, however, rounded off by dots.

Legend, arranged as a square:

محمد رسول الله

with single dots at the corner angles, and two small circles filling in the vacant spaces outside of each word.

Margin.—Two plain circular lines, with an outer circle of dots.

REVERSE.—Central legends in three lines within a triple circle composed of dots, circlelets, and an inner plain line. I transcribe the legend, with due reservation, as:

بالله بنو عمرو بن ملجم

ARMAD.

No. XXXI. Silver. Mr. BURGESS. Unpublished.

OVERSE.

محمد
الله رسول
اشركه لا

REVERSE.

محمد
رسول
الله
محمد

'ABD-ALLAH (*Wali and Melik*.)

No. XXXII. Silver. New varieties. Mr. BURGESS. Unpublished.

OVERSE.

محمد
رسول
الله
عبد الله

REVERSE.

بالله ولي
عبد الله
ومل

In terminating this brief Muhammadan section, I ought to advert, momentarily, to the information obtained from the early Arabian travellers in India, respecting the mixed currencies of Sind and the adjoining provinces.

The Merchant Sulaimān, A.H. 237 (A.D. 851), is the first who affords us any insight into the condition of the circulating media of the land: he tells us that, among other pieces used in commerce in the dominions of the *Balhorā*, *Tātariya* dirhams took a prominent place, and that these were reckoned in value as equal to $1\frac{1}{2}$ of the ordinary coins of the King.*

* Al-Fa Zai, circa 503 A.H. who follows Sulaimān, incidentally mentions: "Autrefois, l'on portait dans l'Inde les dinārs du Sind (دينار السند) dont chacun équivalait à trois dinārs ordinaires et davantage,"—(وما زاد) p. 153, Reinaud's translation.

So, later in point of time, the Egyptian author of the *Masalik-al-Abyār* refers to the "*Tankah* d'or" as equal to 3 *Mithkāl*. This was the modern representative of the normal ancient weight of 100 Ratis, (*Sataraktika*), or, as nearly as possible, 175 grains. See *My Pathan Kings*, pp. 217 et seq., and *My Ancient Indian Weights*, pp. 12, 36, 70.

The identification of this term *Tāhiriya*, has formed the subject of much vague speculation; M. Reinaud's latest conjecture pointed at a derivation from the Greek *στάτις*, *Stater*.*

I myself have, for long past, persistently held that the true term was to be found in *Tāhiriya*, the name of a dynasty dominant above all others in Eastern Asia at the period of the Merchant's visit to India.†

This conclusion has gradually been strengthened by the discovery of the exact generic word in the unique Oxford MS. text of Ibn Khurdādhbah,‡ and in the more critical version of Mas'audi,§ lately completed in Paris.

To these evidences, I am now able to add the definite legend of a coin of Ṭalhah bin Ṭāhir, struck at Bust, on the Helmund, in A.H. 209 (A.D. 824).

ṬALHĀH BIN ṬĀHIR, A.H. 209.

Copper: size, 5½; weights, 30, 31, and 22·5 grains. Bust. A.H. 209 (A.D. 824). Two specimens, Cunningham collection, B.M. A third coin, recently acquired, by the B. M., contributes the legible name of the Mint.¶

OBVERSE.—

Centre:— لا اله الا الله وحده لا شريك له

Margin:— بسم الله صوب هذا الفس بيست سنة تسع ومائى

REVERSE.—Central device, a reduced Sassanian head, to the right, with the usual flowing back-hair, and traces of the conventional wings above the cap, the border of the robe is bossed or beaded.

In front of the profile the name of the *طلحة* is inserted.

Margin:— محمد رسول الله مما امره الامير طلحة على مدي عبدالله

This coin has further claims upon our attention, in its testimony to the survival of old types and the continuity of the recognition of Sassanian devices in Seistán, extending, in its local influences, even to the confessed followers of Islām, up to so late a period as 209 years after the Hijrah of Muhammad

* "La monnaie qui circule dans ses États consiste en pièces d'argent, qu'on nomme *thatherya*, الطاطرية. Chacune de ces pièces équivaut à un dirhem et demi, monnaie du souverain." *Relation des Voyages*, Paris, 1845, I. p. 25; Reinaud, *L'Inde*, 1849, p. 235; Gildemeister, *de Rebus Indicus*, Bonn, 1836, p. 166, Tod's *Rajasthan*, quoted in Prinsep's *Essays*, I. 86 Dr Sprenger, in his edition of Mas'audi, proposes the interpretation of *Talatawya*.

† The Arabic text of Yāqūbī, edited by Juynboll (Lugd. Bat., 1861), gives the dates of this family as follows:—

Ṭāhir bin Aī Ḥosain	-	-	-	A.H. 205	A.D. 820-1
Ṭalhah bin Ṭāhir	-	-	-	A.H. 207	A.D. 822-3
'Abdallah bin Ṭāhir	-	-	-	A.H. 216	A.D. 830
Ṭāhir bin 'Abdallah	-	-	-	A.H. 230	A.D. 844-5
Muḥammad bin Ṭāhir	-	-	-	A.H. 248	A.D. 862-3
Yāqūb bin Laṣ	-	-	-	A.H. 259	A.D. 872-3

See also Prinsep's *Essays*, U. T., p. 304; *Hanza Isfahāni* (Gottwaldt), pp. 177, 228, &c., &c.

‡ *Journ. Asiatique*, 1865, p. 289. M. B. de Meynard, I find, adhered to the *Tatherder*, in defiance of Professor Cowell's testimony to *Tahiriya*. Elliot's *Historians*, vol. I. p. 4.

§ Text, vol. I. p. 332.

¶ Mr. S. L. Poole discovered the correct reading of this mint from a later coin of *Lah bīn 'Alī*, A.H. 298 N.C. vol. XIII p. 169.

Considered under this aspect of fixity of national designs, it may instruct us in the classification of some of the devices previously noticed,* about which our knowledge is at present indeterminate in the extreme. We know from the later developments of the Indo-Muhammadian coinages of the immediate successors of Mahmūd of Ghaznī,† that the Eastern *Turki* Muslims were less strict in their denunciations of emblems and figures, than their presumed more orthodox co-religionists of the West, and that in these cases the Northern invaders of India freely accepted the national types of the conquered kingdoms, which in this sense may furnish data for tracing back and discriminating the earlier examples of parallel assimilations.

To return to the material estimates of the *Sindī* currencies, we are in a position to cite the consecutive testimony of Iṣṭakhrī and Ibn Ḥaukal, whose verbatim texts in their latest exhaustive form are reproduced in the foot-note.‡ These restored versions authorize us to infer that there were, among other impinging or still extant national methods of weighing and estimating metallic values *inter se*, certain market rates, or prices current, for international exchanges, which were quoted in fractions at that time, as our half-crowns still count, in defiance of decimals, in the London stock lists.

From these returns we gather that there were coins termed "Victorious" equivalent to five ordinary dirhams in the local exchange, and that, concurrently the *Bāzār* or open market recognized a totally different scale, based upon a coinage only *plus* $\frac{1}{3}$ th or $\frac{1}{3}$ rd above the home issues.

With the very imperfect numismatic materials, extant, it would be presumptuous to pretend to fix, even approximately, the coin weights and measures obtaining in such a vague international crossway as Maṣṣūrah; but I could quote within narrow geographical or epochal limits, such extreme variations of weights of dinārs, dirhams and copper coins a discretion, that, if I wished it, I might prove almost any given sum to momentary demonstration, an exercise which, as a collector of positive facts, I specially desire to avoid.

* p. 26 *ante*.

† Prinsep's *Essays*, vol. I. p. 333; *Pathān Kings of Delhi*, p. 58; *Journ. R. As. Soc.*, vol. XVII. pp. 171, 177.

‡ Iṣṭakhrī, ونقودهم القاهريّات كل درهم نحو خمسة دراهم ولهم درهم يقال له الطاطري في الدرهم
Ibn Ḥaukal, ونقودهم الهندھاريّات كل درهم منها خمسة دراهم ولهم درهم يقال له الطاطري في الدرهم
وزن درهم وثلاثين
درهم وثمان

The conversion of the *Ḳaheriya* into *Ḳandahāriya* seems to have been a purely arbitrary correction, and one not justified by the tenor of the associate text.

Kandahār is not mentioned elsewhere in Ibn Ḥaukal's geographical lists. The town at this period does not appear to have attained any degree of importance. See Goeje's text, p. 297. The name, however, occurs in Ibn Khordādbah, IV., p. 278.
